

MEMORANDUM

DATE: July 14, 2025

To: Jason Chan, Chief Executive Officer, ECMO PRN, LLC

FROM: Arthur Black, Principal Transportation Planner, LSA

SUBJECT: 147 Beacon Street Parking Management Plan

LSA is pleased to present this Parking Management Plan for the proposed Bay Area Sports House (project) at 147 Beacon Street in South San Francisco, California. Bay Area Sports House is a privately owned facility that provides volleyball instruction and training to school-aged athletes from ages 8 to 17 and provides pickleball courts for public matches. In a letter dated March 10, 2025, the City of South San Francisco (City) requested a Parking Management and Monitoring Study to identify whether sufficient on-site parking is available to satisfy the parking demand generated by the project.

PROJECT DESCRIPTION

The project site is an industrial area surrounded by warehouses and business parks. The current General Plan land use is designed as Business Technology Park High and the zoning is Business Technology Park-High (BTP-H). BTP-H being classified as a Non-Residential Zoning District allows for the use of Indoor Sports and Recreation with the approval of a Conditional Use Permit. Access to the project site is provided by Beacon Street, which is designated as an Industrial roadway in the City General Plan Mobility and Access Element. Figure 1 illustrates the project site.

The existing facility at 147 Beacon Street is a warehouse building. The project proposes to occupy the warehouse building for the use of two volleyball courts and two pickleball courts.

As stated previously, the project is a facility that provides volleyball instruction and training to school-aged athletes. As a result, most of the athletes are transported to and from the facility rather than driving themselves and parking. Although the operator is not currently identified, it is anticipated that the project could operate 8:00 a.m. to 10:00 p.m. seven days a week with the majority of customers being on site from approximately 3:00 p.m. to 10:00 p.m. on weekdays and 8:00 a.m. to 8:00 p.m. on weekends.

The pickleball courts are open for public sessions for pickup matches or through scheduled reservations; therefore, the courts would be open throughout the day. For the purpose of this analysis, it was assumed that the pickleball courts would operate daily between 7:00 a.m. to 10:00 p.m.

Parking Management and Monitoring Study
Regional and Project Location*

CITY OF SOUTH SAN FRANCISCO PARKING REQUIREMENTS

Pursuant to South San Francisco Municipal Code (SSMC) Section 20.330.004 for Required Parking Spaces, all Commercial Entertainment and Recreation (All Subclassifications), uses are subjected to a Parking Management and Monitoring Study required pursuant to Section 20.330.004(E). Based on SSMC Section 20.330.004(E), a Parking Management and Monitoring Study shall include:

1. Total square footage of all uses within existing and proposed development and the square footage devoted to each type of use.
2. Parking demand estimates using parking generation studies from professionally recognized and/or comparable studies from development(s) similar to the proposed use(s).
3. Survey of existing on-street and on-site parking within proximity of the project site.
4. Management procedures for peak demand periods, including the potential of shared parking, remote parking, wayfinding signage, attendants, or valet, and the anticipated effects on vehicle queues and on-street parking.
5. Description of other characteristics of the project that could result in reduced or increased parking demand, such as staggered work shifts, telecommuting, employee per square foot or customer/visitor trips compared to the accepted industry standard for that use.
6. For "Freight/Truck Terminal and Warehouse" and "Parcel Hub" uses, a description of the type of freight to be distributed and radius of delivery map.
7. Occupancy surveys if requested by the City (not to exceed once every three years).

ANTICIPATED PEAK PARKING DEMAND

Project Peak Parking Demand

Volleyball Courts

Based on the typical operations of a volleyball facility that offers instruction and training to school-aged athletes (and consistent with similar volleyball uses), there would be a maximum of 14 people per court and one staff member present during operations, or a maximum of 29 people during full operations of both volleyball courts. For a conservative analysis, it is assumed that every student is dropped off individually without carpooling. Therefore, it is calculated that there would be a peak parking demand of 29 parking spaces during the peak sessions. However, during transition periods between the training sessions, parking demand may exceed 29 due to the simultaneous drop-off and pick-up of student athletes. As such, a further analysis of peak parking demand was analyzed.

The Institute of Transportation Engineers (ITE) *Parking Generation Manual*, 6th Edition (2023), does not provide parking rates for youth sports clubs. As such, the parking demand for the facility was based on surveys of similar facilities. A previous parking analysis for a volleyball club published data (RK Engineering for City of Garden Grove, 2011, provided in Attachment A) collected at three operating facilities in California. Table A displays the parking survey results.

Table A: Average Surveyed Volleyball Courts Peak Parking Demand Rate

Location	Address	Size (sf)	Courts	Peak Parking Demand	Parking Ratio (per TSF)	Parking Ratio (per court)
South Coast Soccer City	540 Maple Ave., Torrance, CA	73,000	7	156	2.14	22.29
Saddleback Volleyball Club	26923 Fuerte Dr., Lake Forest, CA	51,000	9	144	2.82	16.00
Upland Sports Arena	1721 West 11 th St., Upland, CA	66,000	5	107	1.62	21.40
Average					2.19	19.90

Source: *Next Level Sports Complex Observed Parking Demand Study* (RK Engineering for City of Garden Grove, 2011).

sf = square feet

TSF = thousand square feet (or thousand-square-foot)

As shown in Table B, based on the average parking demand for similar facilities using a per court ratio, the proposed two court facility would require 40 parking spaces. Therefore, for a conservative analysis, it is estimated that there would be a peak parking demand of 40 parking spaces during the transition period between sessions. A weekend survey of similar volleyball facilities was also conducted for the same three facilities. However, the average parking demand for all three facilities was lower than that of the weekday. Therefore, a weekend parking analysis was determined to not be necessary.

Table B: Project Volleyball Courts Peak Parking Generation Summary

Land Use	Size	Unit	Parking
Peak Period Parking Demand Rates¹			
Volleyball Facility		courts	19.90
Peak Period Parking Demand			
Volleyball Facility	2	courts	40

Source: Compiled by LSA (2025).

¹ Parking rates referenced *Next Level Sports Complex Observed Parking Demand Study* (RK Engineering for City of Garden Grove, 2011).

Pickleball Courts

The ITE *Parking Generation Manual*, 6th Edition (2023), does not provide parking rates for pickleball courts. As such, the parking demand for the facility was based on surveys of similar facilities. Table C shows the two operating pickleball facilities that were surveyed in California and their corresponding peak parking ratios. The trip generation surveys conducted are shown in Attachment B.

Table C: Average Surveyed Pickleball Courts Peak Parking Demand Rate

Location	Address	Courts	Peak Parking Demand	Parking Ratio (per court)
Tustin Pickleball Courts	1302 Service Road, Tustin, CA	10	37	3.70
Newport Beach Country Club Pickleball Courts	11 Clubhouse Drive Newport Beach, CA 92660	31	93	3.00
			Average	3.35

Source: LSA (2023).

¹ Parking rates based on the Tustin Pickleball Court Trip Generation Count, November 2023 and Newport Beach Country Club Pickleball Courts, November 2023.

As shown in Table D, based on the average parking demand for similar facilities, using a per court ratio, the proposed two-court facility would require seven parking spaces.

Table D: Project Pickleball Courts Peak Parking Generation Summary

Land Use	Size	Unit	Parking
Peak Period Parking Demand Rates¹			
Pickleball Courts		courts	3.35
Peak Period Parking Demand			
Pickleball Courts	2	courts	7

Source: LSA (2025).

Adjacent Warehouse Peak Parking Demand

Because of the shared use parking with the adjacent warehouse, a shared parking demand analysis was also conducted during the overlapping hours of operation between the project and the peak parking of the adjacent warehouse. The parking generation for the adjacent warehouse is developed using rates from the latest edition of the ITE *Parking Generation* (6th Edition). Table E summarizes the parking generation from the adjacent warehouse. As shown in Table E, the adjacent warehouse is estimated to have a peak parking demand of seven parking spaces during the warehouse's peak period. ITE *Parking Generation* also provides data showing that weekend parking rates for warehousing are far lower.

Table E: Adjacent Warehouse Parking Generation Summary

Land Use	Size	Unit	Parking
Peak Period Parking Demand Rates¹			
Warehousing		TSF	0.370
Peak Period Parking Demand			
Warehousing	18.5	TSF	7

Land Use Code 150 – Warehousing

TSF = thousand square feet (or thousand-square-foot)

PARKING SUPPLY

Project Parking Supply

The proposed project would have 16 off-street parking spaces within 147 Beacon Street. Out of the 16 parking spaces, 9 parking spaces are along the north side of the building and 7 parking spaces are along the west side of building perpendicular to Beacon Street.

Adjacent Warehouse Parking Supply

In addition to the 16 off-street parking spaces, the proposed project has a parking agreement with the adjacent warehouse owners at 127–131 Beacon Street to implement shared parking. An additional 22 off-street parking spaces are available adjacent to the warehouse. As such, there would be a total of 38 off-street parking spaces available to the proposed project between the project site and the adjacent warehouse.

PARKING SURVEYS

As required by SSMC Section 20.330.004(E), parking surveys were conducted on a typical weekday on Thursday, March 20, 2025, and on Saturday, March 22, 2025. These surveys are included in Attachment B.

Weekday Parking Survey

Based on the weekday parking survey conducted, there was a peak occupancy of one parking space on the adjacent warehouse lot between 2:00 p.m. and 10:00 p.m. The northern portion of Beacon Street had a peak occupancy of eight parking spaces (47 percent utilization) during this time. The western portion of Beacon Street (i.e., nearest the project site) had a peak occupancy of 12 parking spaces (57 percent utilization). The southern portion of Beacon Street had a peak occupancy of 14 parking spaces (70 percent utilization). In total, a maximum of approximately 60 percent of the on-street parking is currently occupied during the afternoon.

Weekend Parking Survey

On the surveyed Saturday, only one vehicle was parked on the adjacent warehouse lot between 8:00 a.m. and 5:00 p.m. On-street parking demand on Beacon Street was much lower than on weekdays. The northern portion had a peak occupancy of five parking spaces (29 percent utilization), the western portion had a peak occupancy of seven parking spaces (33 percent utilization), and the southern portion had a peak occupancy of three parking spaces (15 percent utilization). In total, only 25 percent of the on-street parking was occupied at the peak of weekend demand.

SHARED PARKING SUPPLY VERSUS DEMAND

Since the proposed project will coordinate with the adjacent warehouse owners to use the neighboring parking lot, a combined parking demand and supply analysis was conducted for both properties, which have a total of 38 off-street parking spaces. Based on the surveys of parking demand of other similar facilities, the proposed project is anticipated to have a peak parking demand of 40 parking spaces for the volleyball courts, 7 parking spaces for the pickleball courts, and

7 parking spaces for the adjacent warehouse. However, it is anticipated that the peak parking for each of the land uses would take place at different times of the day. As such, a time-of-day distribution of each for each of the land uses was applied to more accurately estimate peak parking of both sites. Table F summarizes the peak parking demand of the volleyball courts, the pickleball courts, and the adjacent warehouse.

Table F: Peak Parking Demand of the Proposed Project and Adjacent Warehouse

Time	Volleyball (Peak Parking Demand: 40)		Pickleball (Peak Parking Demand: 7)		Warehousing (Peak Parking Demand: 7)		Total Demand
	Percentage of Peak ¹	Actual Demand	Percentage of Peak ²	Actual Demand	Percentage of Peak ³	Actual Demand	
3:00 p.m.	16%	7	32%	3	100%	7	17
4:00 p.m.	16%	7	69%	5	91%	7	19
5:00 p.m.	78%	32	74%	6	74%	6	44
6:00 p.m.	83%	34	61%	5	47%	4	43
7:00 p.m.	91%	37	19%	2	26%	2	41
8:00 p.m.	92%	37	1%	1	20%	2	40
9:00 p.m.	100%	40	0%	0	17%	2	42
10:00 p.m.	67%	27	0%	0	1%	1	28

Source: LSA (2025).

¹ Time-of-day distribution for parking demand based on the surveys conducted in Next Level Sports Complex Observed Parking Demand Study (RK Engineering for City of Garden Grove, 2011).

² Time-of-day distribution for parking demand based on the Tustin Pickleball Court Trip Generation Count, November 2023 and Newport Beach Country Club Pickleball Courts, November 2023.

³ Time-of-day distribution for parking demand referenced for the ITE *Parking Generation Manual*, 6th Edition (2023).

Based on the peak parking demand of the proposed project and adjacent warehouse, it is anticipated that there would be a peak demand of 44 parking spaces during the transition period between the classes. During this transition period, the parking demand may exceed the available parking spaces by 6 parking spaces.

However, the project site has a designated space for loading and unloading immediately in front of the building entrance. It is anticipated that this loading and unloading area would be used by parents dropping off and picking up athletes. Use of the loading and unloading area would significantly improve the speed of loading and unloading of athletes and the peak number of vehicles waiting to pick-up/drop students would be reduced. Given the improved efficiency of the drop-off/pickup operation, the total parking demand is expected to be reduced by four parking spaces (i.e., 10 percent). As such, it is anticipated at during the brief transition period between classes, there would be only two vehicles using on-street parking spaces. The parking surveys showed that on-street parking has sufficient capacity to absorb this demand.

In the event the loading/unloading zone is underutilized and a parking shortfall is observed, the facility operators could schedule a 10-minute to 15-minute gap between classes. With sufficient time between classes, the parking demand peak would be reduced as the overlap between drop-off and pickup is minimized.

SUMMARY AND CONCLUSION

The City has requested Bay Area Sportshouse at 147 Beacon Street in South San Francisco, California to complete a Parking Management Plan to identify whether sufficient on-site parking is available to satisfy the parking demand generated by the project. The project is an existing warehouse building that is proposed to house two pickleball courts and a volleyball instruction facility with two courts. The volleyball facility could operate between 8:00 a.m. and 10:00 p.m. seven days a week. Based on survey data of other volleyball facilities, the peak hours are anticipated between approximately 3:00 p.m. to 10:00 p.m. on weekdays and 8:00 a.m. to 8:00 p.m. on weekends. The pickleball courts are anticipated to be open for public sessions throughout the day and assumed to operate daily between 7:00 a.m. to 10:00 p.m. To maximize the use of existing parking spaces, the project would coordinate with the owner of the adjacent warehouse (127–131 Beacon Street) to share parking supply.

Parking demand for this facility was estimated using surveys of similar facilities in California. Considering typical operations, a peak demand of 29 parking spaces is anticipated during full operation of both volleyball courts. During the brief transition period between classes, peak demand would be 40 parking spaces. Surveys showed that parking demand during the weekend is lower than on weekdays. Based on surveys of pickleball facilities, it was estimated that the project's pickleball courts would have a peak demand of seven parking spaces. Parking demand for the adjacent warehouse building would peak at seven parking spaces if it were fully utilized as a warehouse building.

These three uses would not experience their peak parking demand at the same time. Applying parking variation by time of day, and accounting for the increased efficiency resulting from the loading zone, shows that a maximum demand for 40 parking spaces would be anticipated during the transition period between volleyball classes.

The project site has 16 off-street parking spaces and the adjacent warehouse has 22 parking spaces for a total of 38 parking spaces available to the proposed project. Surveys of on-street parking demand showed that 60 percent are occupied on a weekday and 25 percent are occupied on a weekend. The on-street parking areas would be able to absorb the demand for two additional vehicles during the brief transition period between volleyball classes.

In the event the loading/unloading zone is underutilized, and a parking shortfall is observed, the facility operators could schedule a 10-minute to 15-minute gap between classes. With sufficient time between classes, the parking demand peak would be reduced as the overlap between drop-off and pick-up is minimized.

**Subject: Next Level Sports Complex Observed Parking Demand Study,
City of Garden Grove**

Dear Mr. Luzzi:

Introduction

RK ENGINEERING GROUP, INC. (RK) is pleased to provide this observed parking study for the Next Level Sports Complex Training Center. The proposed location of this site would be at 12821 Knott Street in the City of Garden Grove. At full capacity, the proposed project will consist of approximately 120,800 square feet (S.F.) of indoor athletic training and development facility use. The site provides for a total of 420 parking spaces which includes 42 parking spaces on Brady Street as shown in Exhibit B.

Next Level Sports Complex's primary use is to support the training and education of skills/techniques for achieving peak performance in basketball, volleyball, and other related sports. It is anticipated that during the initial phase of operations (January 2012 – January 2013), the number of basketball courts and volleyball courts will increase as demand for the business increases. This "ramp up" period will ultimately consist of 12 basketball courts and 16 volleyball courts.

Next Level Sports will partner closely with the Garden Grove Parks & Recreation to support programs that are designed to enhance the athletic performance of its members. The facility will support private coaching, clinics and club sports. In addition, the facility plans to support out-of-state athletic events. These events will utilize vans/shuttles/buses to transport participants to and from the complex from out of state and local airports. The complex will not offer general public use/entrants, host local tournaments or local competitions that will generate an overflow parking situation. All customers/members will be enrolled in the programs in order to use the facility.

The peak business hours of the sports complex are anticipated to be from 6:00 PM to 10:00 PM, on Monday through Friday and 10:00 AM to 3:00 PM, on Saturday and Sunday. At peak operating times, there is expected to be a maximum of 613 occupants within the

facility. For private coaching, clinics and club sports, participation will be from 5-15 participants per court. There will be no more than thirty-five (35) total players, coaches, officials, etc. on each court at any one time. Additionally, the facility will only offer seating necessary to support the athletes. Spectator seating will be very limited. The sports complex is designed so that most parents/guardians will be able to conveniently drop-off and pick-up athletes to/from the complex without having to park.

It should be noted that Radio Shack is currently occupying 20,000 square feet of building space and has 60 parking stalls designated until their lease ends in January of 2013. Next Level Sports Complex will occupy the entire building (120,800 square feet) by January of 2013. This space will be utilized by Next Level Sports Complex for support activities like office space, team conference rooms, storage, etc. For the purpose of this analysis, the projected peak parking demand for the initial 100,800 S.F. of building space (Scenario 1 January 2012 – January 2013) and the future 120,800 S.F. of building space (Scenario 2 January 2013 – Future) was included in order to determine the future peak parking demand rate for the site during both occupancy conditions.

City of Garden Grove Municipal Parking Code

Due to the unique land use, the City of Garden Grove Municipal Parking Code does not have a requirement for multi-sport training facilities. Therefore, the City of Garden Grove Municipal Parking Code (*Section 9.16.040.180 Parking Management*) allows a parking study to be conducted in order to determine the appropriate parking rate for the project.

RK conducted a total of six (6) parking surveys at three (3) similar training facilities in order to generate realistic parking demand rates based on the existing demand at these three (3) existing sites. Based upon these observed parking demand surveys, RK has been able to establish a peak parking demand rate for the specific type of use planned for the proposed Next Level Sports Complex in Garden Grove. It should be noted that an independent data collection company was hired to conduct the observed parking counts at each location.

The peak parking demand rate data would be applied to the proposed Next Level Sports Complex development in order to determine whether the provided on-site parking at the new facility would be able to accommodate the anticipated peak parking demand.

Observed Parking Study Parameters

RK has conducted a total of six (6) weekday and weekend parking surveys at the three (3) indoor multi-sport locations listed below:

1. **South Coast Soccer City:** (73,000 S.F. / 7 Indoor Soccer Fields)
540 Maple Avenue, Torrance CA
 - a. 1 Weekday Survey on Wednesday, August 24, 2011
 1. 11:00AM – 10:30PM at 30 minute intervals
 - b. 1 Weekend Survey on Saturday, August 20, 2011
 2. 10:00AM - 8:30PM at 30 minute intervals
2. **Saddleback Valley Volleyball Club:** (51,000 S.F. / 9 Indoor Volleyball Courts.)
26923 Fuerte Drive, Lake Forest, CA
 - a. 1 Weekday Survey on Wednesday, August 24, 2011
 1. 11:00AM – 10:00PM at 30 minute intervals
 - b. 1 Weekend Survey on Saturday, August 20, 2011
 2. 9:00AM – 8:00PM at 30 minute intervals
3. **Upland Sports Arena:** (66,000 S.F. / 2 Indoor Soccer Fields & 3 Volleyball Courts)
1721 West 11th Street, Upland, CA
 - a. 1 Weekday Survey on Wednesday, August 24, 2011
 1. 9:00AM – Midnight at 30 minute intervals
 - b. 1 Weekend Survey on Saturday, August 20, 2011
 2. 9:00AM – 8:00PM at 30 minute intervals

The parking survey time frames were conducted in order to coincide with the hours of operation at each of the indoor multi-use facilities for both weekend and weekday activities. It should be noted that the month of August represents a peak utilization month for these facilities. During the month of August these indoor training facilities host sports camps and tournaments when school is not in session. Due to summer vacation, enrollment is at its highest levels.

It should be noted that the facilities analyzed in the observed parking analysis have uses like a pro-shop, snack bar / food services, office space, conference rooms, etc. These uses are considered to be ancillary and therefore accommodate the users within the facility. The observed parking demand counts took into account all uses within each facility.

Visitors attending the facilities during peak operating hours may park in the adjacent parking lots if the parking lot of the sports complex is perceived to be occupied. Additionally, it is also common for visitors attending adjacent buildings to park in the sports complex parking lot and visit other uses. Due to the possible sharing of parking spaces, special care was taken to ensure that only vehicles parked specifically to visit the indoor sports complex were counted regardless of where they parked. Therefore, in order to determine an accurate parking demand, parking counts were conducted for all vehicles parking in the surrounding area that were specifically visiting the sports complex.

The parameters of the observed parking surveys are as follows:

1. Some of the indoor sports facilities are located adjacent to other land uses with shared parking conditions and, as a consequence, special care was taken to ensure that only vehicles parked specifically to visit the sports facilities were counted.
2. Appendix A shows the actual parking survey taken at each location. Table 1 contains a detailed account of each indoor sports complex and its approximate square footage. The parking demand shown in Table 1 represents the peak demand at each location during the peak weekend and weekday periods. Satellite images of all locations analyzed are included in Appendix C.

Findings

The findings of the study are as follows:

1. Table 1 shows each indoor training complex address, square footage and peak parking demand for activities that are similar to what is expected at the proposed Next Level Sports Complex in Garden Grove. The peak parking demand figures shown in Table 1 are based upon the parking survey shown in Appendix A.
2. Due to the fact that Radio Shack is planning to continue to occupy approximately 20,000 S.F. of building space until January of 2013, two (2) scenarios have been analyzed for the proposed development:
 - a. Scenario 1 (January 2012 – January 2013) projects the peak parking demand rate based on 100,800 square feet of building space.
 - b. Scenario 2 (January 2013 – Future) projects the peak parking demand rate based on 120,800 square feet of building space.

Following is a summary of the peak parking counts that occurred during the parking survey when there were similar activities as expected at the proposed Next Level Sports Complex in Garden Grove.

Saturday, August 20th & Wednesday, August 24th Observed Parking Counts

- c. The peak weekday parking demand that occurred at any of the sites was 156 parking spaces. The weekday peak hour is 9:00 PM.
- d. The peak weekend parking demand that occurred at any of the sites was 144 parking spaces. The weekend peak hour was 2:30 PM.

Table 2 shows the calculated peak parking rates for similar activities expected at the Next Level Sports Complex in Garden Grove based upon the observed parking survey.

Saturday, August 20th & Wednesday, August 24th Observed Parking Demand Rates

- a. The peak weekend and weekday parking rate calculated was 2.82 parking spaces per 1,000 square feet of building area.
- b. The average peak weekday and weekend parking rate plus 10% increase to calculate the worse case scenario for all locations analyzed are 2.41 parking spaces per 1,000 square feet of building area.

- c. In order to be conservative, a "Worse Case Scenario" the peak parking demand rate plus 10% was calculated. Therefore, as shown in Table 2 and Table 3 the peak parking demand rate of 3.11 spaces per thousand square feet of building area represents the most intense parking rate.

Table 3 represents the calculated parking demand for the proposed Next Level Sports Complex in Garden Grove. Exhibit A shows the location of the proposed development and Exhibit B shows the proposed site plan.

Saturday, August 20th & Wednesday, August 24th Observed Parking Counts

- a. The weekend peak parking rate that was used to calculate the required number of spaces for the proposed development is 3.11 parking spaces per 1,000 S.F. of building area. This rate was calculated using the peak parking rate generated in Table 2 and adding an additional 10% to this figure. This rate was based upon the activities expected to occur at the Garden Grove facility.
- b. **Scenario 1:** The calculated peak parking demand for the proposed development would be **313** parking spaces. The site proposes to provide 360 parking spaces. This results in a surplus of **47** parking spaces during the peak parking period.
- c. **Scenario 2:** The calculated peak parking demand for the proposed development would be **376** parking spaces. The site proposes to provide 420 parking spaces. This results in a surplus of **44** parking spaces during the peak parking period.

Due to the unique use, the City of Garden Grove Municipal Code allows for a parking demand analysis to be conducted in order to determine the appropriate parking rate. RK has conducted an extensive parking survey of three (3) indoor sports complex facilities. During many hours of these surveys, typical high use activities (i.e. tournaments, soccer games, basketball games, volleyball games, etc.) occurred. The peak demand plus ten (10) percent that occurred at the highest observed location (Saddleback Volleyball Club) was used to establish the parking demand rate for the Next Level Sports Complex in Garden Grove. This rate (3.11 per thousand square feet of building area) represents a worse case scenario and is the most intense observed parking rate for the proposed Next Level Sports Complex.

Conclusions

Taking into account the data collected during this analysis, RK would make the following recommendations:

1. The purpose of this parking study is to seek relief from the City of Garden Grove Municipal Parking Code as it pertains to indoor multi-use training facilities. The proposed Next Level Sports Complex in the City of Garden Grove primary use is for training on skills and techniques in volleyball, basketball and individual team practices. Activities are proposed to be offered through the Garden Grove Park and Recreation programs along with physical education programs. Due to this unique use, the Municipal Parking Code allows a parking study to be conducted in order to determine the appropriate parking rate for the project.
2. The site provides for a total of 420 parking stalls which includes 42 parking stalls on Brady Street. The City of Garden Grove will allow parking on Brady Street.
2. **Scenario 1 (January 2012 – January 2013):** The site is projected to have a peak parking demand of 313 parking spaces based on the peak parking rates generated in this study. The site will provide 360 parking spaces, thereby resulting in 47 surplus parking spaces during peak times.
3. **Scenario 2 (January 2013 - Future):** The site is projected to have a peak parking demand of 376 parking spaces based on the peak parking rates generated in this study. The site will provide 420 parking spaces, thereby resulting in 44 surplus parking spaces during peak times.
4. Next Level Sports Complex is proposing to “ramp up” the number of volleyball courts and basketball courts during its initial start-up period (January 2012 – January 2013). It should be noted that this was not taken into account during the parking analysis. The observed parking rate assumes a worse case scenario by calculating the parking rate as if the facility was fully operational at all times.
5. By taking into account the projected worse case scenario, parking appears to be sufficient to accommodate the parking demands at the proposed Next Level Sports Complex in Garden Grove based upon planned operations for typical weekday and weekend conditions.

RK is pleased to provide this parking study for the Next Level Sports Complex in Garden Grove. If you have any questions regarding this study, or would like further review, please do not hesitate to call us at (949) 474-0809.

Sincerely,
RK ENGINEERING GROUP

Table 1
Observed Parking Survey Results¹

Location Name	Address	Project Size (Square Feet)	Total Number of Spaces Provided ²	Peak Observed Parking Demand		PEAK PARKING HOUR	
				Weekday	Weekend	WEEKDAY Wednesday 8/24/11	WEEKEND Saturday 8/20/11
South Coast Soccer City	540 Maple Ave, Torrance, CA 90503	73,000	130	156	65	9:00 PM	10:30 AM
Saddleback Volleyball Club	26923 Fuerte Drive, Lake Forest, CA 92630	51,000	173	53	144	11:30 AM	2:30 PM
Upland Sports Arena	1721 West 11th Street, Upland, CA 91786	66,000	199	107	83	6:00 PM	10:00 AM

¹ Based upon the parking survey results shown in Appendix A. Special care was taken to only count visitors attending the facilities regardless of where they parked.

² Total number of parking spaces was determined by the number of stalls on-site and off-site.

Table 2
Average Calculated Peak Parking Demand Rate

Location Name	Address	Project Size	Peak Parking Demand ¹	Calculated Parking Rate (Spaces per 1,000 S.F.)
South Coast Soccer City	540 Maple Ave, Torrance, CA 90503	73,000	156	2.14
Saddleback Volleyball Club	26923 Fuerte Drive, Lake Forest, CA 92630	51,000	144	2.82
Upland Sports Arena	1721 West 11th Street, Upland, CA 91786	66,000	107	1.62
Average Parking Rate				2.19
Increased Parking Rate 10%				2.41

Peak Observed Parking Demand Rate (Worse Case Scenario)

Location Name	Address	Project Size	Peak Parking Demand ¹	Calculated Parking Rate (Spaces per 1,000 S.F.)
Saddleback Volleyball Club	26923 Fuerte Drive, Lake Forest, CA 92630	51,000	144	2.82
Increased Parking Rate 10%				3.11

¹ The Saddleback Volleyball Club was observed to have the highest peak parking demand. Therefore, it has been used to establish the peak parking demand rate for the proposed Garden Grove Next Level Sports Complex.

Table 3

**Parking Demand for the Proposed Next Level Sports Complex
(Jan 2012 - Jan 2013)¹
Scenario 1**

Location Name	Address	Project Size (Square Feet)	Parking Rate²
Next Level Sports Complex	12821 Knott Street, Garden Grove	100,800	3.11
Total Parking Required Based upon the Parking Survey			313 Parking Spaces
Total Parking Provided On-site			360 Parking Spaces
Parking Surplus			47 Parking Spaces

**Parking Demand for the Proposed Next Level Sports Complex
(January 2013 - Future)¹
Scenario 2**

Location Name	Address	Project Size (Square Feet)	Parking Rate²
Next Level Sports Complex	12821 Knott Street, Garden Grove	120,800	3.11
Total Parking Required Based upon the Parking Survey			376 Parking Spaces
Total Parking Provided On-site			420 Parking Spaces
Parking Surplus			44 Parking Spaces

¹ Existing tenant (Radio Shack) will continue to occupy 20,000 S.F. of the building until January 2013. At this time, Next Level Sports Complex will occupy the entire building (120,800 S.F.). Therefore, the peak parking demand was calculated for both occupancy scenarios.

² The parking rate was calculated by taking the peak parking rate calculated for the highest demand site (Saddleback Volleyball Club) listed in Table 2 and increasing the rate by an additional 10% to project the worse case scenario.

Appendix B

City of Garden Grove Municipal Parking Code

GARDEN GROVE MUNICIPAL CODE (printed 4/22/10)

SECTION 9.16.040.150: Parking spaces required

The number of off-street parking spaces required shall be no less than as set forth in the following schedule. Parking shall be calculated by the maximum building occupancy and/or the gross floor area, as applicable. Where the application of these schedules results in a fractional space, then the resulting fraction shall be rounded up to the higher whole number.

USE	REQUIRED MINIMUM PARKING SPACES
A. Residential Uses.	
1. Preschool/daycare	1 space per care provider and staff member plus 1 space for each 6 children
B. Commercial Uses.	
1. Retail	
a. Under 40,000 square feet	1 space per 200 square feet gross floor area
b. 40,000--100,000 square feet	1 space per 225 square feet gross floor area
c. 100,000+ square feet	1 space per 250 square feet gross floor area
2. Restaurants Eating, Drinking Establishments, Cafes, Cafeterias, Lounges, Bars	
a. Attached 0-16 seats less than 300 s.f. of customer/dining area	1 space per 200 square feet of gross floor area
b. Attached 16+ seats	1 space per 100 square feet of gross floor area with a minimum of 10 spaces
c. Freestanding	1 space per 100 square feet of gross floor area with a minimum of 10 spaces
d. With entertainment	1 space per 100 square feet of gross floor area (seating and service), plus 1 space per 35 square feet of entertainment area, plus 1 space per 7 square feet of dance floor
3. Service stations	
a. With convenience store	1 space per pump, plus 1 space per 200 square feet of gross floor area of sales area, plus 3 spaces per service bay
b. Without convenience store	1 space per employee, plus 3 spaces per service bay
4. Financial institutions	1 space per 200 square feet of gross floor area if a drive-up window exists. If no window, 1 space per 150 square feet of gross floor area
5. Nursery, home improvement center, building materials,	1 space per 200 square feet gross floor area

furniture, general appliance stores
(large display area)

- | | |
|---|--|
| 6. Hotel and motel manager unit | 1 space per unit plus 2 spaces for hotel |
| 7. Personal service | 1 space per 200 square feet of gross floor area |
| 8. Professional studio | |
| a. Art, music, dance, martial arts | 1 space per employee, plus 1 space per 2 students |
| b. Photography, portrait, radio,
TV, recording | 1 space per 200 square feet of gross floor area |
| c. Karaoke studios | 1 space per 200 square feet of gross floor area |
| 9. Automatic car wash | 5 times the internal washing capacity for stacking and
drying, plus 1 space per employee based on the
maximum shift, not less than 3 (internal capacity is
defined as conveyor length divided by 20 feet) |
| 10. Auto rental | |
| a. Office only | 1 space per 250 square feet of gross floor area |
| b. Vehicle storage | 1 space per 350 square feet of gross floor area of
office, plus 1 space per vehicle |
| 11. Auto and boat sales, leasing | 1 space per 400 square feet of gross floor area of
inside display, plus 1 space per 2,000 square feet of
outside display, plus 1 space per 500 square feet of
gross floor area of repair, plus 1 space per 300 square
feet of gross floor area of parts storage and sales area |
| 12. Auto repair and maintenance | 1 space per 200 square feet of gross floor area
including auto paint and body of office space, plus 3
spaces per service bay |
| C. Office. | |
| 1. General business offices | 1 space per 250 square feet of gross floor area |
| 2. Medical, dental and related
service support facilities | 1 space per 170 square feet of gross floor area |
| D. Industrial Uses. | |
| 1. Industrial uses | |
| a. Buildings less than 20,000
square feet of gross floor area | 2.25 spaces per 1,000 square feet of gross floor area |
| b. Buildings 20,001 to 100,000
square feet of gross floor area | 2 spaces per 1,000 square feet of gross floor area |
| c. Buildings over 100,000 square
feet of gross floor area | 1 space per 1,000 square feet of gross floor area |
| d. Incidental Office: | |
| i. Under 30 percent of gross floor
area | No additional requirements |
| ii. 30 to 50 percent of gross floor | 1 space per 250 square feet of gross floor area |

area of a building

2. Mini-warehouses 1 space per 250 square feet of gross floor area of manager's office and residence, plus 2 covered spaces for manager's residence

E. Public and Semi-Public.

1. Hospital 4 spaces per bed

2. Private school

a. Elementary thru high school 1 space per each employee, plus 1 space for each 6 students

b. College or university 1 space per employee, plus 1 space per 3 students

3. Trade school--Adult education 1 space per employee, plus 1 space per 3 students (based on maximum occupancy allowable by building code), or 1 space per 35 square feet of instructional area, plus 1 space per 250 square feet of office space

4. Churches/religious facilities Fixed seats: 1 space per each 3 fixed seats
No fixed seats: 1 space for each 21 square feet of area designated for assembly purposes
All ancillary area(s) shall provide 1 space for each 250 square feet of gross floor area

F. Commercial Recreation.

1. Golf course 100 spaces per 9 holes; 200 spaces for 18 holes, plus requirements for other facilities

2. Golf driving range 1.5 spaces per tee

3. Bowling alley 3 spaces per alley plus spaces for other uses on-site

4. Movie theaters

a. Single screen .5 space per seat

b. Multi screen .3 space per seat

5. Arcades, pool hall 1 space per 200 square feet of gross floor area

6. Night clubs 1 space per 7 square feet of dance floor, plus 1 space per 35 square feet of additional gross floor area

7. Assembly halls and dance floors 1 space per 7 square feet of dance floor or assembly area, plus 1 space per 35 square feet of additional gross floor area

8. Spa/health clubs/gyms 1 space per 200 square feet of gross floor area

9. Private clubs 1 space per each 15 square feet of assembly area

10. Water oriented parks

a. Public swimming pool 1 space per 500 square feet, plus spaces required for other uses on-site

b. Amusement park Parking study required

11. Skating rinks 1 space per 100 square feet of gross floor area, plus spaces required for other uses on-site

12. Adult entertainment uses

- | | |
|---|--|
| a. Adult bookstores including video rental and video arcade | 1 space per 90 square feet |
| b. Adult motion picture theater/mini motion picture theater | 1 space per 3 seats, plus 5 spaces for employees |
| c. Cabaret | 1 space per 25 square feet of gross floor area |
| d. Massage parlor | 1 space per 200 square feet of gross floor area |
| e. Escort bureau/introductory service | 1 space per 200 square feet of gross floor area |

SECTION 9.16.040.160: Parking: Special requirements

The following parking requirements are applicable to all land uses, unless otherwise stated (spaces provided for the following uses shall be clearly designated by signs, colored lines or other appropriate indicators):

- A. Handicapped Parking. Handicapped spaces shall be located to provide easy access to the main building or designated entrance to the building to be used by the physically handicapped in accordance with federal, state and local laws.
 - 1. Parking spaces for the physically handicapped shall be provided at a ratio of not less than one space per forty parking spaces provided on an office, commercial or industrial site and shall count toward fulfilling the total automobile parking requirements.
 - 2. A minimum of one handicapped parking space shall be provided for each nonresidential building that requires more than fifteen spaces.
 - 3. Handicapped spaces shall be identified by blue striping and the installation of the appropriate signage incorporating the international physically handicapped symbol.
- B. Parking Space Size.
 - 1. All parking spaces, stalls and garages or carports shall conform to minimum stall sizes as adopted by the Planning Commission.
- C. Compact Car Parking Spaces. Up to twenty percent of the required parking stalls may be compact parking spaces. Compact stall size is subject to public works standards for compact car spaces.
- D. Motorcycle Parking Spaces. Commercial and industrial facilities with twenty-five or more parking spaces shall provide at least one paved designated parking area for use by motorcycles. Said area shall be constructed of concrete.
- E. Bicycles. All nonresidential buildings and places of assembly shall provide adequate locking facilities for bicycle parking at any location convenient to the facility for which they are designated.

SECTION 9.16.040.170: Location of parking spaces

- A. All required open parking spaces and garages shall be located on the same building site or within the same development.

1. Off-site parking for new uses or new construction shall only be permitted with the approval of a parking management plan in accordance with Section 180.
 2. If an irrevocable access and/or parking easement is obtained on another site for use and benefit of the site in issue, and such access and/or parking agreement, when fully exercised, does not diminish the available parking capacity of the site subject to the easement to less than required by this division, and a parking management plan is approved, the parking may be on an adjacent site.
- B. All off-street open and enclosed parking spaces shall be located and maintained so as to be accessible and usable for the parking of motor vehicles.
1. Off-street parking spaces shall not be located in any required setback.
 2. All motor vehicles, trailers, vessels, campers and camper shells must be parked or stored on a fully paved surface with approved entrances and exits to the street.
 3. For projects approved and developed after April 25, 1991, where security gates are proposed to be provided, seventy percent of the guest parking spaces shall be located outside the secured area.

SECTION 9.16.040.180: Joint use/parking management

- A. Overall parking requirements may vary for mixed use, multi-tenant developments, uses that have staggered hours of operation, or similar uses that have different operational characteristics. Preparation of a parking management plan shall be required for varying parking requirements from standards established by this article as set forth below. When prepared, a parking management plan shall provide applicable parking standards that address current development trends and the benefits of parking alternatives.
- B. Parking Required. A parking management plan shall be required as follows:
1. Where off-site parking is proposed;
 2. Where parking is to be shared or jointly used among the same or different developments; or
 3. Where the number of parking spaces required is proposed to be reduced; however, no proposed reduction may exceed twenty-five percent of the parking required pursuant to this section.
- C. Plan Contents. The parking management plan shall be prepared by a qualified transportation engineer, in accordance with planning commission policy, and shall include, at minimum, the following elements:
1. Breakdown and description of the proposed uses, including their functional and spatial components;
 2. Statement of the functional area square footage based on the proposed plan;
 3. Statement of parking demands by uses for morning, midday and evening periods, and a statement of employee parking demands;

4. A peak-demand calculation by adding the various components together to determine the midday and evening demands with the higher figure represents the minimum number of spaces to be provided, and
 - a. A ten percent increase in the minimum number of spaces shall be added to the peak demand calculation to allow for future changes in the types of uses proposed in the original development plan, and
 - b. Use changes throughout the life of the project requiring more than the ten percent figure shall require the submittal and approval of an amended parking management plan.
5. A cross-check analysis for functional and operational aspects; and
6. Parking management plans shall include a copy of proposed easements or conditions, covenants and restrictions tying the parking agreement to the project in perpetuity, prohibiting revision without city approval. Pre-existing, shared parking proposals shall be accompanied by a recorded off-site parking covenant running with the land.
