NOTES

1. THIS PLOT WAS PREPARED FROM INFORMATION FURNISHED IN A OWNER'S POLICY OF TITLE INSURANCE, PREPARED BY CHICAGO TITLE INSURANCE COMPANY, DATED DECEMBER 2, 2005, POLICY NO."CAC1177 41-7741-2347-0084702362-CTIC-2005-04. NO LIABILITY IS ASSUMED FOR MATTERS OF RECORD NOT STATED IN SAID PRELIMINARY TITLE REPORT THAT MAY AFFECT THE TITLE LINES, OR EXCEPTIONS, OR EASEMENTS OF THE PROPERTY.
2. ALL DISTANCES SHOWN HEREON ARE IN FEET AND DECIMALS THEREOF.
3. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THIS TOPOGRAPHIC SURVEY WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. (A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES). HOWEVER, THE ENGINEER CAN ASSUME NO RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF ITS DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT WHICH ARE NOT SHOWN ON THESE DRAWINGS.
4. BENCHMARK:
   3" BRONZE DISK STAMPED "NATIONAL OCEAN TITLE SURVEY NO. 11, 1975" FOUND ON TOP OF RETAINING WALL ON WEST WALL OF THE "ROD AND GUN CLUB" LOCATED NEAR THE NORTH END OF OYSTER POINT BOULEVARD.
   ELEVATION = 15.70
5. BASIS OF BEARINGS:
   THE BEARING N50°03'35"E OF THE CENTERLINE OF ECCLES AVENUE AS SHOWN ON THAT CERTAIN MAP ENTITLED "SOUTH SAN FRANCISCO INDUSTRIAL PARK, UNIT 3-B" RECORDED IN VOLUME 62 OF MAPS, PAGES 3-8, SAN MATEO COUNTY RECORDS WAS USED AS THE BASIS OF ALL BEARINGS SHOWN UPON THIS MAP.

GRADING NOTES

1. ALL GRADING SHALL BE DONE IN ACCORDANCE WITH RECOMMENDATIONS IN THE UPDATED GEOTECHNICAL INVESTIGATION REPORT PREPARED FOR THIS SITE BY CLEARY CONSULTANTS, INC. DATED DECEMBER 23, 2011, PROJECT NO. 1327.1, SER. 3478
2. CONTRACTOR SHALL DETERMINE HIS OWN EARTH QUANTITIES AND BASE HIS BID ACCORDINGLY.
3. COMPACTION TO BE DETERMINED PER GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
4. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THESES IMPROVEMENT PLANS WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES. HOWEVER, THE ENGINEER CAN NOT ASSUME RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF THEIR DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT ARE NOT SHOWN ON THESE DRAWINGS.
5. ADJUSTMENTS TO BUILDING PAD ELEVATIONS OR PARKING LOT GRADES TO ACHIEVE EARTHWORK BALANCE SHALL BE MADE ONLY WITH APPROVAL OF THE ENGINEER.
6. ALL WORK, ON-SITE AND IN THE PUBLIC RIGHT-OF-WAY, SHALL CONFORM TO THE CITY OF SOUTH SAN FRANCISCO STANDARDS AND REQUIREMENTS

EARTHWORK SUMMARY

CUT: 2815 CY

FILL: 2720 CY

NOTE:

THE EARTHWORK QUANTITIES LISTED ON THESE PLANS ARE STATED ONLY FOR CALCULATION OF GRADING AND BUILDING PERMIT FEES. THESE QUANTITIES DO NOT INCLUDE TRENCH OR FOOTING SPOILS, SHRINK OR SWELL FROM COMPACTING EFFORTS OR OTHER VARIABLES. THE ENGINEER MAKES NO REPRESENTATION THIS SITE WILL BALANCE. THE CONTRACTOR SHALL DETERMINE HIS OWN EARTHWORK QUANTITIES AND BASE HIS BID ACCORDINGLY.

IRRIGATION NOTES

IRRIGATION REQUIREMENTS

A permanent automatic irrigation system shall be provided for all landscape areas using drip irrigation and low gallonage rotor heads.

The design will use water monitoring and water sensing devices.

The irrigation plan shall demonstrate compliance with the City of South San Francisco water use and landscape ordinances.

PC: 05.09.12

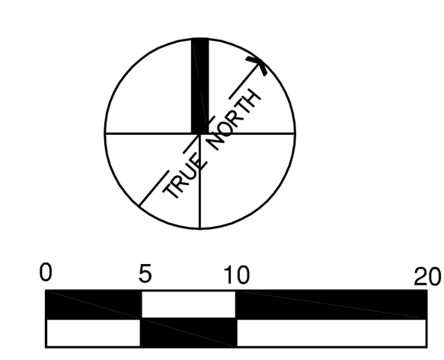
IRRIGATION NOTES

IRRIGATION REQUIREMENTS

A permanent automatic irrigation system shall be provided for all landscape areas using drip irrigation and low gallonage rotor heads.

The design will use water monitoring and water sensing devices.

The irrigation plan shall demonstrate compliance with the City of South San Francisco water use and landscape ordinances.



Scale 1" = 10 ft
sheet size = 42"x30"

SITE PLAN / ROOF PLAN

DESCRIPTION

THIS PROJECT CONSISTS OF TWO FOUR-STORY STEEL-FRAMED SHELL STRUCTURES TOTALING 262,287 SF IN AREA AND A DETACHED FIVE LEVEL OPEN PARKING STRUCTURE.

THE TWO STRUCTURES SHALL BE CONSIDERED AS ONE BUILDING FOR ALLOWABLE AREA CALCULATIONS. THE BUILDING SHELL STRUCTURES SHALL BE OF TYPE I-B CONSTRUCTION AND SURROUNDED ON ALL SIDES WITH YARDS OF NOT LESS THAN 37'-0" IN WIDTH. THE BUILDING SHALL BE 90'-0" IN HEIGHT AT ITS HIGHEST POINT.

ACCESS TO THE SITE SHALL BE FROM ECCLES AVENUE. THE MAJORITY OF THE PARKING SHALL BE PROVIDED BY THE PARKING STRUCTURE WITH ADDITIONAL SURFACE PARKING LOCATED THOUROUGHOUT THE SITE. MOST ACCESSIBLE PARKING IS PROVIDED WITHIN THE PARKING STRUCTURE. PARKING IS PROVIDED FOR CARPOOL AND ELECTRIC VEHICLES.

THE EXISTING BUILDING, PAVING AND ASSOCIATED SERVICE STRUCTURES, ETC ARE PROPOSED TO BE REMOVED UNDER A SEPARATE PACKAGE.

SECOND FLOOR = 35,660 SF
THIRD FLOOR = 38,225 SF
FOURTH FLOOR = 37,297 SF
TOTAL BUILDING AREA = 144,692 SF

BUILDING B
FIRST FLOOR = 27,293 SF
SECOND FLOOR = 28,747 SF
THIRD FLOOR = 31,362 SF
FOURTH FLOOR = 30,193 SF
TOTAL BUILDING AREA = 117,595 SF

GROSS FLOOR AREA = 262,287 SF

OCCUPANT LOAD COUNT: (TABLE 1004.1.1)

BUILDING A
FIRST FLOOR = 33,510 SF/100 SF PER OCC. = 336 OCC.
SECOND FLOOR = 35,660 SF/100 SF PER OCC. = 357 OCC.
THIRD FLOOR = 38,225 SF/100 SF PER OCC. = 383 OCC.
FOURTH FLOOR = 37,297 SF/100 SF PER OCC. = 373 OCC.

BUILDING B
FIRST FLOOR = 27,293 SF/100 SF PER OCC. = 273 OCC.
SECOND FLOOR = 28,747 SF/100 SF PER OCC. = 288 OCC.
THIRD FLOOR = 31,362 SF/100 SF PER OCC. = 314 OCC.
FOURTH FLOOR = 30,193 SF/100 SF PER OCC. = 302 OCC.

EXIT WIDTH CALCULATIONS: (SECTION 1005)

BUILDING A: 383 OCC. X 0.2" FACTOR = 77" / 3 EXITS = 26" < 36" WIDE DOORS, MIN.

BUILDING B: 314 OCC. X 0.2" FACTOR = 63" / 3 EXITS = 21" < 36" WIDE DOORS, MIN.

STAIR WIDTH CALCULATIONS: (SECTION 1005)

BUILDING A (3RD FLR): 383 OCC. X 0.3" FACTOR = 114.9" / 2 STAIRS = 58" WIDE STAIRS, MIN.

BUILDING B (3RD FLR.): 314 OCC. X 0.3" FACTOR = 94.2" / 2 STAIRS = 48" WIDE STAIRS, MIN.

2.4 Environmental Measures Incorporated into the Project

The following measures are proposed as part of the Project and are shown on the architectural drawings (sheet P.A.1.1a) and in application materials. These measures are in addition to the City's standard requirements identified in Chapter 1 save for Air Quality items 1-3 and Site Remediation Measures that require J Permits to remove asbestos and lead based paint containing materials. The measures are designed to reduce the environmental affect of the Project.

A. Air Quality and Green House Gas Emission Reduction Measures

1) Aspects Of Project Designed To Limit Fugitive Dust Emissions. The construction contractor shall reduce construction-related air pollutant emissions by implementing BAAQMD's basic fugitive dust control measures. Therefore, the Project shall include the following requirements in construction contracts:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- A publically visible sign shall be posted with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action with 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.
- All exposed surfaces shall be watered at a frequency adequate to maintain minimum soil moisture of 12 percent. Moisture content can be verified by lab samples or moisture probe. (i.e., during any phase that will expose previously covered soils, there will be soil moisture monitoring in two locations on site, twice a day (mid-morning and mid-afternoon) and additional watering, beyond the twice-a-day watering referenced above, will be applied if the monitoring reveals that soil moisture content has dropped below 12%)
- All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph. [Occurs less than three percent of the year.]
- Vegetative ground cover (e.g., fast-germinating native grass seed) or other plants that offer dust mitigation measures shall be planted in disturbed areas as soon as possible and watered appropriately until vegetation is established.
- The simultaneous occurrence of excavation, grading, and ground-disturbing construction activities on the same area at any one time shall be limited. To the extent feasible, activities shall be phased to reduce the amount of disturbed surfaces at any one time.
- All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
- Sandbags or other erosion control measures shall be installed to prevent silt runoff to public roadways from sites with a slope greater than one (1) percent.

2) Aspects of Project Designed To Limit Exhaust Emissions. The construction contractor shall implement the following measures during construction to reduce construction-related exhaust emissions:

- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to two (2) minutes Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- All construction equipment, diesel trucks and generators shall be equipped with Best Available Control Technology for emission reductions of NOx and PM to the maximum extent feasible. To this end, all generators and air compressors used on site shall be electric. All on road trucks used onsite shall be Year Model 2007 or better. Propane or LNG-fueled booms and scissor lifts shall be used.
- Tier 2 or better for 20 percent of horsepower-hours of off-road diesel equipment shall be used during construction and 65 percent of horsepower hours during demolition.
- All contractors shall, to the maximum extent feasible, use equipment that meets the ARB's most recent certification for off-road heavy duty diesel engines.
- No onsite grinding, crushing or shredding of asphalt or debris shall occur onsite.
- Potential future measures that achieve the same or better performance criteria shall be submitted to the City for review and approval prior to initiating any changes.
- Applicant shall provide the City and Genentech with a list of and schedule for demolition, grading and construction equipment and activities.
- A construction superintendent shall be on site during all demolition, grading and construction activities to enforce these regulations.

3) Compliance with BAAQMD Regulation 11, Rule 2 during Demolition. Demolition of existing buildings and structures would be subject to BAAQMD Regulation 11, Rule 2 (Asbestos Demolition, Renovation, and Manufacturing). BAAQMD Regulation 11, Rule 2 is intended to limit asbestos emissions from demolition or renovation of structures and the associated disturbance of asbestos-containing waste material generated or handled during these activities.

The rule requires the notification of BAAQMD of any regulated renovation or demolition activity. This notification includes a description of structures and methods utilized to determine whether asbestos-containing materials are potentially present. All asbestos-containing material found on the site must be removed prior to demolition or renovation activity in accordance with BAAQMD Regulation 11, Rule 2, including specific requirements for surveying, notification, removal, and disposal of material containing asbestos.

4) Compliance with BAAQMD Regulation 8, Rule 3 for Architectural Coatings. Emissions of volatile organic compounds (VOC) due to the use of architectural coatings are regulated by the limits contained in Regulation 8: Organic Compounds, Rule 3: Architectural Coatings (Rule 8-3). Rule 8-3 was recently revised to include more stringent VOC limit requirements. The revised VOC architectural coating limits, which became effective on January 1, 2011, are projected to result in a 32 percent reduction of VOC emissions in the Bay Area associated with architectural coating applications.

B. Transportation and Green House Gas Reduction Measures

The applicant proposes a Transportation Demand Management Program (TDM Program) (475 Eccles Avenue Transportation Demand Management Program, Fehr & Peers, October, 2011). The TDM Program is aimed at a 30 percent mode shift compared to projects that do not include a TDM, to qualify for a 1.0 FAR. The TDM Program is required by law to be reviewed by the City and modified by the Applicant as required by the City to meet the mode shift requirements. Performance audits are also required. The Applicant proposes the following measures, at a minimum, for the TDM Program:

1. Bicycle Parking (racks for visitors and sheltered bicycle parking for employees).
2. Shower and locker facilities (in lease agreement).
3. Preferential Carpool and Vanpool Parking.
4. Passenger loading zones for carpool and vanpool drop-off.
5. Pedestrian Connections.
6. TDM coordinator (in lease agreement).
7. Carpool/Vanpool Matching services (TDM coordinator responsibility).
8. Guaranteed ride home (through Traffic Congestion Relief Alliance).
9. Information Board for TDM Program (in lease agreement).
10. Promotional programs including new employee orientation and TDM Programs (TDM coordinator responsibility).
11. Shuttle bus service to Caltrain and BART and downtown Dasher, coordinated with Alliance (TDM coordinator responsibility.)
12. Membership in Peninsula Traffic Congestion Relief Alliance.

C. Construction and Operational Design Elements Addressing Environmental Sustainability

The LEED design and construction strategies that have been integrated into the planning documents include:

1. The use of a previously developed site without impacts associated with endangered species, flood plain, and adjacency to wetlands or bodies of water.
2. The Project will document and remediate asbestos previous to demolition.
3. A TDM Program that includes the use of public/privates shuttles providing access to major public transportation hubs. In addition to the requirements for bike parking the Project will include shower/changing room amenities for bike users.
4. The Project will provide adequate preferred parking for low-emitting and alternative fuel vehicles. The Project will provide fewer parking spaces than those referenced in local zoning requirements.
5. The Project provides more than 20 percent of the total site area in open space. More than 50 percent of all parking will be under cover to reduce heat island effects for site surfaces.
6. The Project has developed tenant design and construction guidelines including recommendations and requirements for tenant improvements.
7. Indoor plumbing fixtures within the core and shell design and those required by the tenant scope of work will achieve greater than a 30 percent water use reduction.
8. Site landscape and irrigation equipment will provide irrigation efficiencies greater than 50 percent reduction from a standard summer baseline.
9. The Project will provide fundamental and enhanced commissioning (Cx) of MEP energy systems, including a requirement for tenant improvement Enhanced Cx and a 10 month post-occupancy return to verify equipment warranty and operational efficiencies. Current energy model targets anticipate a greater than 15% reduction in energy compared to Title 24 and ASHRAE 90.1. Base building and tenant improvement mechanical and food service equipment will be required to comply with enhanced refrigerant management requirements. The Project will provide adequate areas for the collection and storage of recyclables, and tenants will be required to implement desk-side recycling.
10. The Project has developed a Construction Waste Management plan that targets at least 75% diversion of landfill waste, with a goal of 95% diversion. The Project has integrated requirements into planning specifications and plans to target a greater than 20% recycled and regional content (by cost) in all building materials for the project. The Project will target a greater than 50 percent FSC certified wood content (by cost) in all new wood building materials for the project.
11. The Project will require, and require tenants, all materials installed within the vapor barrier of the Project to comply with LEED/CalGreen VOC & CARB requirements, and specifically contain no-added urea-formaldehyde (NAUF) products. The Project will conduct, and require tenants to conduct, and Indoor Air Quality Management Plan for Construction Activities that requires contractors to comply with SMACNA IAQ guidelines for best practices during construction.
12.

Please see Table 2.1 for a complete list of LEED Silver measures provided by the Applicant to be incorporated into the Project, or an equivalent thereto.

TABLE 2.1
LEED SILVER MEASURES

Site Selection	Brownfield Redevelopment
Alternative Transportation, Public Transportation Access	Alternative Transportation, Bicycle Storage & Changing Rooms
Alternative Transportation, Low Emitting & Fuel Efficient Vehicles	Alternative Transportation, Parking Capacity
Site Development, Maximize Open Space	Tenant Design and Construction Guidelines
Heat Island Effect, Roof	Innovation in Design: Green Building Education Program
Water Use Reduction, 30% Reduction	Water Efficient Landscaping, Reduce by 50%
Fundamental Commissioning of the Building Energy Systems	Optimize Energy Performance - (15%)
Fundamental Refrigerant Management	Enhanced Commissioning
Storage & Collection of Recyclables	Construction Waste Management, Divert 50%
Construction Waste Management, Divert 75%	Recycled Content, 10%
Recycled Content, 20%	Regional Materials, 10%
Certified Wood	Minimum IAQ Performance
Environmental Tobacco Smoke (ETS) Control	Construction IAQ Management Plan, During Construction
Low-Emitting Materials, Adhesives & Sealants	Low-Emitting Materials, Paints & Coatings
Low-Emitting Materials, Carpet Systems	Low-Emitting Materials, Composite Wood & Agrifiber Products
Daylight & Views, Views for 90% of Spaces	Exemplary Performance: SSc4 Comprehensive Transit Plan
Exemplary Performance: EQc3 Tenant IAQ Plan, Construction	

D. Site Remediation for Asbestos, Lead Based Paints and Recognized Environmental Conditions

The Applicant will, as indicated on the plans and application materials, remove lead based paints and has already removed much of the asbestos containing materials in the building (Certificate of Job Completion, Professional Asbestos and Lead Services, Inc., March-April, 2012). During Project demolition minor amounts of asbestos will be removed as electrical equipment is removed providing access to the location of the material.

During the Phase 1 Environmental Site Assessment (URS, July 2012) one potential sump was observed on the Project site during the site reconnaissance. The potential sump is on the warehouse floor, and was obstructed with a metal cover. The cover was coated with significant oil staining. Subsequent to the site reconnaissance, facility personnel attempted to remove the cover and photograph the area below. There was an additional metal cover present below that could not be removed. This metal cover was also stained with oil, and the area below could not be assessed.

The Applicant as shown on the plans will conduct the following remediation which is largely standard procedure. The work will be done during the demolition and site preparation phase of the Project.

TABLE 2.2
REMEDIATION MEASURES

Media	Hazardous Materials	Approach
Vault/pit interior concrete Investigation	All	• Mobilize equipment to remove metal cover • Inspect interior concrete for the presence of liquid or significant staining and integrity of the concrete. • Collect sample of any liquid material present or concrete chip sample.
Soil - Investigation	All	• If staining/liquid are present and concrete is in poor condition soil sampling should be conducted. • Apply for boring permit from the San Mateo County Environmental Health Department (SMCEHD). • Advance one soil boring below the pit using a direct push drill rig to 20 feet below ground surface. • Collect soil samples at 1, 5, 10 and 20 feet bgs. • Analyze samples for VOCs, total petroleum hydrocarbons, semi volatile organic compounds (SVOCs) PCBs, and metals. • Report results to the SMCEHD and consult for remediation requirements. • Remediation of contaminated soils can be completed during the demolition stage of the Project.
Soil Remediation (ex-situ)	Fuels	• Reuse on Site (if concentration is less than 100 ppm). • Haul and Dispose at appropriate landfill. • Capping and vapor barrier. • Treat on site (see below).
Soil Remediation (ex-situ)	VOCs (gasoline fuels, solvents)	• Consult the SMCEHD for requirements. • Haul and Dispose. • Aeration – requires a notification to BAAQMD, daily volumes are limited. • Vapor Stripping – apply vacuum system to covered piles, notify BAAQMD. • Bioremediation - apply bio-treatment materials, moisture and "work" soil piles. • Thermal Desorption – various vendors provide mobile treatment units. • Capping and vapor barrier.
Media	**Hazardous Materials**	**Approach**
Soil Remediation (ex-situ)	Inorganics (metals)	• Consult BAAQMD and SMCEHD for requirements. • Haul and Dispose. • Chemical Stabilization. • Sorting – reduce waste volume by screening to target contaminant particle size.
Soil Remediation (in-situ)	VOCs	• Consult SMCEHD for requirements. • Soil Vapor Extraction – apply vacuum to vapor wells, notify BAAQMD. • In-situ chemical oxidation. • In-Situ Vitrification – use electricity to melt waste and surrounding soils.
Soil Remediation (in-situ)	SVOCs	• Consult SMCEHD for requirements. • Bioremediation – saturate soils with bio-treatment materials. • Chemical Stabilization – saturate soils with chemicals to immobilize contaminants. • In-Situ Vitrification. • Capping .
Groundwater - Investigation	All	• If contaminants are detected in the 20 foot below ground surface soil sample an additional boring should be completed to groundwater. • Analyze sample for contaminants detected in soil. • Report results to the SMCEHD and consult on remedial alternatives.
Groundwater Remediation	VOCs	• Consult BAAQMD and SMCEHD for requirements. • Pump and Treat – pump from wells, treat and discharge treated water. • Air Sparging – inject air to volatilize contaminants and create aerobic groundwater conditions suitable for natural bioremediation. Generally applied in conjunction with Soil Vapor Extraction to control released volatiles. • Bioremediation – inject bio-treatment materials into affected groundwater. • Chemical Oxidation – inject oxidation chemicals into affected groundwater.
Groundwater Remediation	SVOCs	• Consult BAAQMD for requirements. • Pump and Treat. • Bioremediation. • Chemical Oxidation.
Groundwater Remediation	Inorganics	• Consult BAAQMD for requirements. • Pump and Treat. • Chemical Immobilization – inject chemicals to precipitate or chemically fix contaminants to soil particles.

The Project submittals note that a Licensed General Contractor with Hazardous Substance Removal Certification from the State of California will inspect and remove the electrical equipment. The qualifications of the contractor will be noted on the plans submitted to the City for issuance of a demolition permit.
