Site History:	

Extracted from TEC Accutite's November 25, 2008 Subsurface Investigation and Site Conceptual Model, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in a light industrial/commercial area of South San Francisco, California. Railroad lines are adjacent to the east. The site is a former Caltrans maintenance station, consisting of an unoccupied one story office and auto-service building. Historic facilities on the site consist of a building identified on Sanborn Fire Maps as “Gas and Oils”, an apparent former service station. Two underground storage tank (UST) systems have likely existed onsite, associated with the former Caltrans station (2,000 gallon capacity) and, presumably, the former service station (unknown capacity). The site was most recently leased to Bob Jr’s Towing and used as a storage yard for impounded vehicles. The site is located on the low lying areas west of San Francisco Bay in San Mateo County. Site topography gently slopes east, towards San Francisco Bay. Site elevation is approximately 19 ft above mean sea level and the nearest surface water is San Francisco Bay, approximately 1,200 feet (ft) east-southeast of the site. In 2007, TEC Accutite completed a Phase I Environmental Site Assessment (ESA) at the subject site, including both the abandoned facility and airspace parcels, and recommended soil testing as part of a Phase II ESA. TEC Accutite advanced a total of 12 soil borings at the site in December 2007 and May 2008 and identified concentrations of petroleum hydrocarbons and metals above applicable San Francisco Bay Regional Water Quality Control Board (SF Bay RWQCB) Environmental Screening Levels (ESLs) (see Section 4.4.3 for a discussion of ESL selection). The City of South San Francisco intends to develop both the abandoned facility and airspace parcels as a new Caltrain station. Plans for this development have been prepared by HNTB, the primary contractor for station construction, which include the construction of a pedestrian underpass requiring rerouting of the major utility lines that run through the site. TEC Accutite conducted the current investigation in order to: • Further investigate the lateral and horizontal distribution of petroleum hydrocarbons and metals in soil and groundwater on the abandoned facility parcel and immediately offsite; • Determine whether environmental remediation would be appropriate and evaluate available remedial technologies to determine the best remedial action alternative; • Develop a recommended course of action for site remediation. This report addresses the first of these three goals. An evaluation of appropriate remedial technologies and a remedial action plan will be finalized pending completion of negotiations between the City of South San Francisco and Caltrans.

Extracted from TEC Accutite's November 25, 2008 Subsurface Investigation and Site Conceptual Model, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report.

The site is located in a light industrial/commercial area of South San Francisco, California. Railroad lines are adjacent to the east.

The site is a former Caltrans maintenance station, consisting of an unoccupied one story office and auto-service building. Historic facilities on the site consist of a building identified on Sanborn Fire Maps as Gas and Oils, an apparent former service station. Two underground storage tank (UST) systems have likely existed onsite, associated with the former Caltrans station (2,000 gallon capacity) and, presumably, the former service station (unknown capacity). The site was most recently leased to Bob Jr s Towing and used as a storage yard for impounded vehicles.

The site is located on the low lying areas west of San Francisco Bay in San Mateo County. Site topography gently slopes east, towards San Francisco Bay. Site elevation is approximately 19 ft above mean sea level and the nearest surface water is San Francisco Bay, approximately 1,200 feet (ft) east-southeast of the site.

In 2007, TEC Accutite completed a Phase I Environmental Site Assessment (ESA) at the subject site, including both the abandoned facility and airspace parcels, and recommended soil testing as part of a Phase II ESA. TEC Accutite advanced a total of 12 soil borings at the site in December 2007 and May 2008 and identified concentrations of petroleum hydrocarbons and metals above applicable San Francisco Bay Regional Water Quality Control Board (SF Bay RWQCB) Environmental Screening Levels (ESLs) (see Section 4.4.3 for a discussion of ESL selection).

The City of South San Francisco intends to develop both the abandoned facility and airspace parcels as a new Caltrain station. Plans for this

development have been prepared by HNTB, the primary contractor for station construction, which include the construction of a pedestrian underpass requiring rerouting of the major utility lines that run through the site.

TEC Accutite conducted the current investigation in order to:
 Further investigate the lateral and horizontal distribution of petroleum hydrocarbons and metals in soil and groundwater on the abandoned facility parcel and immediately offsite;
 Determine whether environmental remediation would be appropriate and evaluate available remedial technologies to determine the best remedial action alternative;
 Develop a recommended course of action for site remediation.

This report addresses the first of these three goals. An evaluation of appropriate remedial technologies and a remedial action plan will be finalized pending completion of negotiations between the City of South San Francisco and Caltrans.

Potential Contamin of Concern:

BENZO[A]PYRENE
LEAD
PETROLEUM
POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)
VOLATILE ORGANICS (8260B VOCS)

Site History:

Site consists of several property parcels along Airport Boulevard and Cypress Avenue in South San Francisco. Properties are to be developed for residential and commercial use. Residual contamination at the site is to be addressed in accordance with a Response Plan being prepared under DTSC oversight. The parcels have a long history of usage dating from the late 1800's to present. Uses included residences, hotels, saloon, gas station, vehicle repair, waste oil collection, vehicle sales and service, blacksmith shop, and parking areas. Several underground fuel and used oil tanks were previously removed and sites closed by San Mateo County Environmental Health (SMCEH). Residual contaminants at the site include Total Petroleum Hydrocarbons (TPH), tetrachloroethylene (PCE), trichloroethylene (TCE), Lead, and Polycyclic Aromatic Hydrocarbons (PAH).

A response plan for cleanup of the site was completed in March 2017. Cleanup consisted of removal of underground fuel storage tanks, excavation of contaminated soil, and installation of a vapor barrier and sub-slab venting system beneath the building foundation. Currently, building construction and development of the site is ongoing and not expected to be completed until 2019. BB (9/2018).

Past Use that Caused Contam: DEGREASING FACILITY, ENGINE TESTING/REPAIR, FUEL - VEHICLE STORAGE/ REFUELING, HOTEL, RETAIL - SERVICE STATION, RETAIL - VEHICLES, UNDERGROUND STORAGE TANKS, VEHICLE MAINTENANCE

Potential Media Affected: INDOOR AIR, OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR

Potential Contamin of Concern:

BENZO[A]PYRENE
LEAD
PETROLEUM
POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)
VOLATILE ORGANICS (8260B VOCS)

Site History:

Site consists of several property parcels along Airport Boulevard and Cypress Avenue in South San Francisco. Properties are to be developed for residential and commercial use. Residual contamination at the site is to be addressed in accordance with a Response Plan being prepared under DTSC oversight. The parcels have a long history of usage dating from the late 1800's to present. Uses included residences, hotels, saloon, gas station, vehicle repair, waste oil collection, vehicle sales and service, blacksmith shop, and parking areas. Several underground fuel and used oil tanks were previously removed and sites closed by San Mateo County Environmental Health (SMCEH). Residual contaminants at the site include Total Petroleum Hydrocarbons (TPH), tetrachloroethylene (PCE), trichloroethylene (TCE), Lead, and Polycyclic Aromatic Hydrocarbons (PAH).

A response plan for cleanup of the site was completed in March 2017. Cleanup consisted of removal of underground fuel storage tanks, excavation of contaminated soil, and installation of a vapor barrier and sub-slab venting system beneath the building foundation. Currently, building construction and development of the site is ongoing and not expected to be completed until 2019. BB (9/2018).

Site History:

Extracted from Environ's November 20, 2009 Remedial Investigation Report and May 21, 2010 Work Plan for Vapor Intrusion, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in a commercial and industrial area of South San Francisco on Point San Bruno east of downtown South San Francisco and Highway 101, and approximately 400 feet south-southwest of the intersection of Sylvester Road and East Grand Avenue. The site consists of approximately 3 acres, divided into the Associated Road Parcel, the Alan Baker property, and 105 Associated Road. Development and known historical uses of the site are discussed below. The Associated Road parcel (approximately 1.02 acres) is currently vacant and undeveloped, and is generally unpaved (a small asphalt-paved area islocated at the entrance located at the south). No street address is linked to the Parcel; street frontage consists of approximately 30 feet along Associated Road (from which the Parcel is accessed), west of the intersection with Sylvester Road. S&S Tours, a charter bus company, leased the Parcel from approximately 1997 through 201 for vehicle parking. A prior report and adjacent site personnel stated that the company also washed buses at the Parcel. Mr. Patel later leased the Parcel in approximately 2004-2005 to a private individual for equipment storage. The Parcel is currently used for the parking and storage of trailers, as well as warehouse transfer operations between neighboring sites (105 Associated Road and 160 Sylvester Road). The Alan Baker property consists of two land parcels at 160 and 180 Sylvester Road, respectively, both of which are developed with warehouse-type buildings. Both buildings are predominantly used for warehouse storage space, and include a small percentage (of the overall square footage) that is used as office space. 160 Sylvester Road (approximately 0.87 acres) is occupied by the Alan Baker Company, which operates a storage and distribution warehouse at the property. Based on Environ's observations and understanding from Alan Baker personnel, the warehouse appears to be primarily used by a neighboring business for the storage of dry goods (e.g. spices, dry food products). 180 Sylvester Road (approximately 0.36 acres) is occupied by Weapon-R Competition Products, an automotive aftermarket products retailer and manufacturer. The building at 105 Associated Road, approximately 29,900 square feet, was constructed in 1955. Between approximately 1956 and 1978, the building was occupied for relatively short periods by a variety of light industrial tenants, including the Morris Manufacturing Company (reportedly a store fixture manufacturing company, and also a subsidiary of Kidde fire safety products), a refrigeration company, an auto part assembly and a distribution company, and various sales operations. The current tenant, San Francisco Spice Company, initially occupied the western portion of the building for use as a food product manufacturing and distribution facility in 1977, and took over the entire building in 1989. The eastern portion of the building was occupied by an auto auction warehouse and a furniture assembly and upholstery facility for relatively short periods during the 1980s. Previous investigations at the site conducted by Environ included Phase I and Phase II environmental site assessments of the Associated Road Parcel and 105 Associated Road property completed in 2006 and several soil, groundwater, and/or soil gas investigations conducted in February 2006, October 2006, June 2007, and October 2009. The primary chemicals of concern at the site appear to be chlorinated volatile organic compounds, chiefly tetrachloroethene, trichloroethene, and their breakdown products cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride in soil gas and/or groundwater. These chemicals were detected at concentrations that exceeded San Francisco Regional Water Quality Control Board's residential and/or commercial Environmental Screening Levels for vapor intrusion concerns for soil gas and/or groundwater. Isolated detections of other chemicals in soil gas and/or groundwater beneath the site and vicinity include 1,1-dichloroehane, 1,1-dichloroethene, 1,1,1-trichloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, benzene, toluene, xylenes, and chloroform. Sampling efforts to date have not identified a significant point source of VOCs in soil at the Associated Road Parcel. A soil gas and groundwater "hotspot" appeared to be located beneath the eastern side of the Parcel immediately adjacent to the Alan Baker property, where TCE and cis-1,2-dichloroethene were identified as the primary contaminants present at that location. Maximum concentrations of TCE in soil gas and groundwater and cis-1,2-DCE found in 2006 are above applicable RWQCB Environmental Screening Levels for soil gas and groundwater. PCE was detected at only two sampling locations in soil gas, but at concentrations below ESLs for soil gas under a commercial land use scenario. Previous sampling also identified a hotspot at the Alan Baker property, specifically with the findings of VOCs in soil gas, soil, and groundwater at the east side of the Site, in proximity to the former gasoline UST and the eastern yard area between the buildings at 160 and 180 Sylvester Road. Through 2007, the PCE detections beneath the Alan Baker property were the only detections of PCE found above laboratory reporting limits in soil and groundwater sampling at the Site and adjacent properties during the investigations conducted by Environ. Concentrations of PCE, TCE, and cis-1,2-DCE detected in groundwater samples collected at the Site in June 2007 (sample locations GP-32 and AB-14) were significantly lower (up to one order of magnitude) than the maximum concentrations found in groundwater during previous investigations in March and April 2006.

Site History:

Extracted from Environ's November 20, 2009 Remedial Investigation Report and May 21, 2010 Work Plan for Vapor Intrusion, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report.

The site is located in a commercial and industrial area of South San Francisco on Point San Bruno east of downtown South San Francisco and Highway 101, and approximately 400 feet south-southwest of the intersection of Sylvester Road and East Grand Avenue. The site consists of approximately 3 acres, divided into the Associated Road Parcel, the Alan Baker property, and 105 Associated Road. Development and known historical uses of the site are discussed below.

The Associated Road parcel (approximately 1.02 acres) is currently vacant and undeveloped, and is generally unpaved (a small asphalt-paved area islocated at the entrance located at the south). No street address is linked to the Parcel; street frontage consists of approximately 30 feet along Associated Road (from which the Parcel is accessed), west of the intersection with Sylvester Road. S&S Tours, a charter bus company, leased the Parcel from approximately 1997 through 201 for vehicle parking. A prior report and adjacent site personnel stated that the company also washed buses at the Parcel. Mr. Patel later leased the Parcel in approximately 2004-2005 to a private individual for equipment storage. The Parcel is currently used for the parking and storage of trailers, as well as warehouse transfer operations between neighboring sites (105 Associated Road and 160 Sylvester Road).

The Alan Baker property consists of two land parcels at 160 and 180 Sylvester Road, respectively, both of which are developed with warehouse-type buildings. Both buildings are predominantly used for warehouse storage space, and include a small percentage (of the overall square footage) that is used as office space. 160 Sylvester Road (approximately 0.87 acres) is occupied by the Alan Baker Company, which operates a storage and distribution warehouse at the property. Based on Environ's observations and understanding from Alan Baker personnel, the warehouse appears to be primarily used by a neighboring business for the storage of dry goods (e.g. spices, dry food products). 180 Sylvester Road (approximately 0.36 acres) is occupied by Weapon-R Competition Products, an automotive aftermarket products retailer and manufacturer.

The building at 105 Associated Road, approximately 29,900 square feet, was constructed in 1955. Between approximately 1956 and 1978, the building was occupied for relatively short periods by a variety of light industrial tenants, including the Morris Manufacturing Company (reportedly a store fixture manufacturing company, and also a subsidiary of Kidde fire safety products), a refrigeration company, an auto part assembly and a distribution company, and various sales operations. The current tenant, San Francisco Spice Company, initially occupied the western portion of the building for use as a food product manufacturing and distribution facility in 1977, and took over the entire building in 1989. The eastern portion of the building was occupied by an auto auction warehouse and a furniture assembly and upholstery facility for relatively short periods during the 1980s.

Previous investigations at the site conducted by Environ included Phase I and Phase II environmental site assessments of the Associated Road Parcel and 105 Associated Road property completed in 2006 and several soil, groundwater, and/or soil gas investigations conducted in February 2006, October 2006, June 2007, and October 2009. The primary chemicals of concern at the site appear to be chlorinated volatile organic compounds, chiefly tetrachloroethene, trichloroethene, and their breakdown products cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride in soil gas and/or groundwater. These chemicals were detected at concentrations that exceeded San Francisco Regional Water Quality Control Board's residential and/or commercial Environmental Screening Levels for vapor intrusion concerns for soil gas and/or groundwater. Isolated detections of other chemicals in soil gas and/or groundwater beneath the site and vicinity include 1,1-dichloroehane, 1,1-dichloroethene, 1,1,1-trichloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, benzene, toluene, xylenes, and chloroform.

Sampling efforts to date have not identified a significant point source of VOCs in soil at the Associated Road Parcel. A soil gas and groundwater "hotspot" appeared to be located beneath the eastern side of the Parcel immediately adjacent to the Alan Baker property, where TCE and cis-1,2-dichloroethene were identified as the primary contaminants present at that location. Maximum concentrations of TCE in soil gas and groundwater and cis-1,2-DCE found in 2006 are above applicable RWQCB Environmental Screening Levels for soil gas and groundwater. PCE was detected at only two sampling locations in soil gas, but at concentrations below ESLs for soil gas under a commercial land use scenario.

Previous sampling also identified a hotspot at the Alan Baker property, specifically with the findings of VOCs in soil gas, soil, and groundwater at the east side of the Site, in proximity to the former gasoline UST and the eastern yard area between the buildings at 160 and 180 Sylvester Road. Through 2007, the PCE detections beneath the Alan Baker property were the only detections of PCE found above laboratory reporting limits in soil and groundwater sampling at the Site and adjacent properties during the investigations conducted by Environ.

Concentrations of PCE, TCE, and cis-1,2-DCE detected in groundwater samples collected at the Site in June 2007 (sample locations GP-32 and AB-14) were significantly lower (up to one order of magnitude) than the maximum concentrations found in groundwater during previous investigations in March and April 2006.

Soil management at this site is governed by an approved Soil Management Plan and its addendums. 2019 South San Francisco Station Redevelopment Project required updated Soil Management Plan, Annual Progress Reports, and a Completion Report. Completion Report submitted in 2023. Elco Yards development project (EnviroStor ID 60003027) will include utility lines installation in the ROW of the Caltrain tracks along Pennsylvania Avenue between Main Street and Chestnut Street in Redwood City in 2023. SGMP and Completion Report are required. Case will remain open for additional improvement projects along the transit corridor.

Site History:

The Site is bounded to the north by Victory Avenue, to the south by Tanforan Avenue, to the east by railroad tracks, and to the west by South Maple Avenue. The site is comprised of a building and a warehouse, which is used for automotive storage. Areas around the buildings are paved or landscaped. The site is located in an industrial area and is adjacent to a tire company. Joseph W. Welch & Investors purchased the site in 1984. The site is now zoned for light industrial use. The property is currently occupied by a number of different tenants, including music studios, auto repair shops and restoration facilities. The Reichold Chemical site is a registered historical landmark by San Mateo County. From 1937 to 1984, Reichhold Chemicals Inc. owned and operated the site. Reichold manufactured paint products using emulsion, phenol, alkyd, and urea resins.

Facility drive-by. No evidence of waste. Site screening conducted which confirmed that no further action is needed at the site. According to the Hazardous Waste Management Operation Plan prepared in 1983, the waste generated at the facility, including paint resin and thinner was placed in 55-gallon drums, for shipment to Class I or II landfills. At the time of closure, all hazardous wastes were transported offsite for disposal at facilities in Benicia and Kettleman Hills, California. The tanks and containers were decontaminated before shipment. In April 1984, composite wipe samples were collected in the drum storage area and analyzed for polychlorinated biphenyls (PCBs), acids, and base compounds. PCBs were found at a concentration less than 0.01 milligram/100 square centimeters, which is less than the 0.1 milligram/100 square centimeters clean-up level for high-contact residential/commercial surfaces specified by Title 40 Code of Federal Regulations, Part 761. In December 1984, wipe sampling was performed on the asphalt and cement pads for PCBs, acids, and base compounds. The results were all non-detect. In February 1985, the site was officially closed with oversight from the Department of Health Services (DHS), Toxic Substances Control Division, predecessor to DTSC. Site Discovery. Facility was identified during a drive-by. Certified Site. Records Search: Site Certified in August 1986.

Background:

The Site is bounded to the north by Victory Avenue, to the south by Tanforan Avenue, to the east by railroad tracks, and to the west by South Maple Avenue. The site is comprised of a building and a warehouse, which is used for automotive storage. Areas around the buildings are paved or landscaped. The site is located in an industrial area and is adjacent to a tire company. Joseph W. Welch & Investors purchased the site in 1984. The site is now zoned for light industrial use. The property is currently occupied by a number of different tenants, including music studios, auto repair shops and restoration facilities. The Reichold Chemical site is a registered historical landmark by San Mateo County. From 1937 to 1984, Reichhold Chemicals Inc. owned and operated the site. Reichold manufactured paint products using emulsion, phenol, alkyd, and urea resins.

Site History:

The same case as the San Mateo County UST case # 550056 closed by the County on 7/20/2011 related to the release from a 8,000-gal acetone UST. The 1996 Risk Based Corrective Action Study states no exposure pathways for remaining acetone; nine groundwater monitoring wells were decommissioned in 1989.

Site History:

Extracted from Golden Gate Environmental's March 31, 2010 Report of Groundwater Monitoring & Additional Site Characterization, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In 1989, the Site was leased by the Coyne Cylinder Company and was occupied by a paint cylinder plant. In August 1989, an 8,000-gallon acetone underground storage tank (UST), associated with the paint cylinder plant, was removed from the southwestern portion of the site. Soil samples collected from the UST excavation by Applied Consultants contained concentrations of acetone up to 9,000 milligrams per kilogram (mg/kg), which indicated that an unauthorized release had occurred. Subsequently, on 26 September 1989 the San Mateo County Health Services Agency (SMCHSA) issued a letter requiring that all soil with acetone concentrations in excess of 100 mg/kg be remediated. In October 1989, three monitoring wells (MW-1, MW-2, and MW-3) were installed downgradient (south) of the former UST location to assess groundwater quality. Groundwater samples from these wells had elevated acetone concentrations. Three additional monitoring wells (MW-4, MW-5 and MW-6) were then installed to assess the horizontal extent of the acetone plume. On 27 February 1990, an additional excavation was completed in the area of the former UST to remove all soils containing acetone concentrations greater than 100 mg/kg. Remedial confirmation samples were collected around the excavation in the presence of a SMCHSA employee. The confirmation samples did not have acetone concentrations greater than 100 mg/kg. Excavated soils were stockpiled onsite and aerated in an effort

to remove volatile constituents within the soil. After five months, soil samples were collected from the stockpile to determine if detectable concentrations of acetone, total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene or xylenes were present. No detectable concentrations were found in the stockpile and the soil was used to backfill the excavation along with imported clean fill. In April 1991, monitoring well MW-1 was converted to recovery well RW-1 and a quarterly groundwater monitoring program was implemented. During the conversion of recovery well RW-1, a pump was installed within the well box and as a result RW-1 could only be sampled through the pump. Groundwater analysis initially included VOCs and TPH as gasoline (TPHg). Several years of monitoring showed that TPHg was not present. Low detections of TPHg were quantified due to peaks caused by acetone and methyl isobutyl ketone (MIBK), and TPHg analysis was discontinued in 1996. Groundwater was pumped, treated and discharged from RW-1 between 21 April 1991 and 11 November 1996. Treated groundwater was discharged to the sanitary sewer system. By 11 November 1996, Applied Consultants estimated that 114.53 gallons of dissolved phase acetone and 0.376 gallons of dissolved MIBK were removed by pumping. Two downgradient monitoring wells (MW-7 and MW-8) were installed at the Site in October 1996 and analyzed for VOCs along with the existing wells. Source area and downgradient monitoring wells (RW-1 and MW-5 through MW-8) continue to be monitored at the Site. On 22 February 2008, Treadwell & Rollo supervised the drilling of three soil borings (SB-6, SB-7, and SB-8) inside the existing warehouse building, using a limited access direct push drill rig. During drilling, soil samples were continuously collected for lithologic description purposes using a 3-foot long macro-core sampler lined with polyvinyl chloride (PVC) liners. An organic vapor meter (photoionization detector [PID]) was used to field-screen the soil samples for VOCs. Organic vapor readings are presented on the boring logs in Attachment A. No soil samples were retained for chemical analyses. The materials encountered in the boring were logged according to the Unified Soil Classification System by a Treadwell & Rollo field geologist under the review of a California-registered geologist. All drilling activities were performed by Precision Sampling, Inc. of Richmond, California. Drilling was performed under a SMCHSA permit (Permit No. 08-0191). Grab groundwater samples were collected from each boring by a Treadwell & Rollo representative. The soil borings were advanced to approximately five to ten feet below the observed groundwater depth in each boring. Five feet of slotted PVC was placed into the borehole once the desired depth was achieved and the groundwater in the borehole was allowed to stabilize prior to sampling. Groundwater sampling was conducted using a small diameter disposable bailer and was immediately transferred into laboratorysupplied sample containers. Following the collection of the groundwater, the sample bottles were labeled, sealed, and placed in an ice-cooled chest for delivery to McCampbell Analytical, a Californiacertified analytical laboratory, using chain-of-custody procedures. The samples were analyzed for VOCs by EPA Method 8260. Soil borings that were not converted into a monitoring well (SB-6 and SB-8) were sealed to the surface with neat cement grout, using the tremie method.

County: SAN MATEO
Latitude: 37.6566635644529
Longitude: -122.405540144879

The Union Pacific Property is a parcel of approximately 1.88 acres (81,893 square feet), located approximately 210 feet north-northeast of the Dubuque Avenue off-ramp from East Grand Avenue in South San Francisco.

Subsurface investigations in 2018 indicated the presence of arsenic, lead, cobalt, copper, antimony, nickel in soils. Several polynuclear aromatic (PNAs) and polycyclic aromatic hydrocarbons (PAHs) were also detected at concentrations exceeding residential ESLs in soils. Benzene, cobalt, copper, lead,

nickel and zinc were detected in the groundwater samples at concentrations exceeding applicable ESLs where groundwater is not a drinking water resource.

The proponent entered into a California Land Reuse and Revitalization Act (CLRRA) agreement with DTSC on January 23, 2020 to oversee cleanup and redevelopment. In September 2020, additional soil and groundwater sampling was conducted to further characterize the site. Elevated concentrations of lead, cadmium, and zinc were found in soil at concentrations greater than the TTLC screening level, and SVOCs were detected at concentrations less than HERO screening levels in one soil boring. Groundwater analytical results were below their respective Water Board ESLs.

Further sampling was planned to further characterize the site and to delineate concentrations of metals greater than the TTLC screening level. The additional sampling was proposed in a Site Assessment Workplan submitted to DTSC. The Site Assessment Workplan was approved on 7/8/2021, with the fieldwork implementation conducted from 7/26/2021 to 7/30/2021.

Additional characterization of the groundwater flow onsite was needed for developing future remediation plans. A Supplemental Groundwater Investigation Workplan to conduct a pump test for the site was approved on 9/29/2021, and fieldwork was completed by 10/27/2021.

A Soil and Groundwater Management Plan was developed for the Site to manage groundwater and contaminated soil onsite during construction related activities to prepare for construction of an underground parking structure. The activities consisted of trenching and DSM wall construction. The Soil and Groundwater Management Plan was approved on 6/16/2022, with fieldwork the implementation conducted from 7/11/2022 to 7/19/2022. Contaminated soil generated during these construction related activities was approved for offhaul on 9/30/2022 in order to protect public health.

After completion of the groundwater investigation, a combined Report of Findings and Draft Response Plan document was submitted to DTSC on 12/21/2021. The Report of Findings reported the results of the Site Assessment Workplan investigation, and the Draft Response Plan proposed remedies to address the contamination onsite. The Report of Findings and Draft Response Plan is currently available for public comment from 9/30/2022 to 10/31/2022. After completion of the public comment period, all public comments will be reviewed and addressed, and any edits that are required to address public comments will be made to the Report of Findings and Draft Response Plan prior to final approval by DTSC.

VOLATILE ORGANICS (8260B VOCS)

Site History:

The Union Pacific Property is a parcel of approximately 1.88 acres (81,893 square feet), located approximately 210 feet north-northeast of the Dubuque Avenue off-ramp from East Grand Avenue in South San Francisco.

Subsurface investigations in 2018 indicated the presence of arsenic, lead, cobalt, copper, antimony, nickel in soils. Several polynuclear aromatic (PNAs) and polycyclic aromatic hydrocarbons (PAHs) were also detected at concentrations exceeding residential ESLs in soils. Benzene, cobalt, copper, lead, nickel and zinc were detected in the groundwater samples at concentrations exceeding applicable ESLs where groundwater is not a drinking water resource.

The proponent entered into a California Land Reuse and Revitalization Act (CLRRA) agreement with DTSC on January 23, 2020 to oversee cleanup and redevelopment. In September 2020, additional soil and groundwater sampling was conducted to further characterize the site. Elevated concentrations of lead, cadmium, and zinc were found in soil at concentrations greater than the TTLC screening level, and SVOCs were detected at concentrations less than HERO screening levels in one soil boring. Groundwater analytical results were below their respective Water Board ESLs.

Further sampling was planned to further characterize the site and to delineate concentrations of metals greater than the TTLC screening level. The additional sampling was proposed in a Site Assessment Workplan submitted to DTSC. The Site Assessment Workplan was approved on 7/8/2021, with the fieldwork implementation conducted from 7/26/2021 to 7/30/2021.

Additional characterization of the groundwater flow onsite was needed for developing future remediation plans. A Supplemental Groundwater Investigation Workplan to conduct a pump test for the site was approved on 9/29/2021, and fieldwork was completed by 10/27/2021.

A Soil and Groundwater Management Plan was developed for the Site to manage groundwater and contaminated soil onsite during construction related activities to prepare for construction of an underground parking structure. The activities consisted of trenching and DSM wall construction. The Soil and Groundwater Management Plan was approved on 6/16/2022, with fieldwork the implementation conducted from 7/11/2022 to 7/19/2022. Contaminated soil generated during these construction related activities was approved for offhaul on 9/30/2022 in order to protect public health.

After completion of the groundwater investigation, a combined Report of Findings and Draft Response Plan document was submitted to DTSC on 12/21/2021. The Report of Findings reported the results of the Site Assessment Workplan investigation, and the Draft Response Plan proposed remedies to address the contamination onsite. The Report of Findings and Draft Response Plan is currently available for public comment from 9/30/2022 to 10/31/2022. After completion of the public comment period, all public comments will be reviewed and addressed, and any edits that are required to address public comments will be made to the Report of Findings and Draft Response Plan prior to final approval by DTSC.

Site History:

San Mateo LOP had overseen two former Leaking underground storage cases (LUST) at the parcel addressed at 600-790 Dubuque, located north of Grand Avenue, east of Highway 101 and west of the main tracks of the Southern Pacific Rail Road in a commercial and industrial district of the City of South San Francisco, California. Limited information regarding the history, age and use of the chemicals at the property is known. Various subsurface investigations and remedial work including removal of underground storage tank (UST), soil and groundwater sampling, installation and sampling of groundwater monitoring wells have performed at 600-790 Dubuque since at least 1988. Closures for both these cases were received from San Mateo LOP in June 2001 and June 2015.

608 Dubuque Avenue (APN 015-021-150) is the southern portion of the parcel addressed as 600-790 Dubuque, San Francisco, California.

DTSC is currently overseeing investigations and cleanup at 508 Dubuque Avenue, a former Union Pacific Property Site (APN 015-021-170). 508 Dubuque site is located immediately adjacent to the south of 608 Dubuque. Based on the 2021-2022 soil vapor investigations conducted at 580 Dubuque Avenue also known as former Union Pacific Property Site), VOCs impacts in soil vapor were identified with concentrations reported at a incremental trend as the investigations advanced closer to the northern boundary of Union Pacific Site. Based on this evidence, it was determined that there was a potential VOCs source at adjoining site at 608 Dubuque Avenue and that soil vapor investigation needs to be conducted at 608 Dubuque Avenue to determine source and its extent.

On December 30, 2022, DTSC sent out a letter inviting the Responsible Party/property owner/s at to enter into a Standard Voluntary Agreement. On January, 2023, the proponent notified DTSC that they were working with their environmental consultant, Allwest, and would consider conducting their own investigation. Responsible Party did not pursue with a SVA agreement with DTSC.

DTSC's Brownfield coordinators have discussed this case with the Water board and a determination was made that since the San Mateo County had already overseen prior cleanup at the site, they would handle the case. As of March 2023, the San Mateo County Local Oversight Program (LOP) has opened the case to investigate the site under Case #: 559200 and are the lead agency to oversee investigation and or cleanup at the site.

Site History:

San Mateo LOP had overseen two former Leaking underground storage cases (LUST) at the parcel addressed at 600-790 Dubuque, located north of Grand Avenue, east of Highway 101 and west of the main tracks of the Southern Pacific Rail Road in a commercial and industrial district of the City of South San Francisco, California. Limited information regarding the history, age and use of the chemicals at the property is known. Various subsurface investigations and remedial work including removal of underground storage tank (UST), soil and groundwater sampling, installation and sampling of groundwater monitoring wells have performed at 600-790 Dubuque since at least 1988. Closures for both these cases were received from San Mateo LOP in June 2001 and June 2015.

608 Dubuque Avenue (APN 015-021-150) is the southern portion of the parcel addressed as 600-790 Dubuque, San Francisco, California.

DTSC is currently overseeing investigations and cleanup at 508 Dubuque Avenue, a former Union Pacific Property Site (APN 015-021-170). 508 Dubuque site is located immediately adjacent to the south of 608 Dubuque. Based on the 2021-2022 soil vapor investigations conducted at 580 Dubuque Avenue also known as former Union Pacific Property Site), VOCs impacts in soil vapor were identified with concentrations reported at a incremental trend as the investigations advanced closer to the northern boundary of Union Pacific Site. Based on this evidence, it was determined that there was a potential VOCs source at adjoining site at 608 Dubuque Avenue and that soil vapor investigation needs to be conducted at 608 Dubuque Avenue to determine source and its extent.

On December 30, 2022, DTSC sent out a letter inviting the Responsible Party/property owner/s at to enter into a Standard Voluntary Agreement. On January, 2023, the proponent notified DTSC that they were working with their environmental consultant, Allwest, and would consider conducting their own investigation. Responsible Party did not pursue with a SVA agreement with DTSC.

DTSC's Brownfield coordinators have discussed this case with the Water board and a determination was made that since the San Mateo County had already overseen prior cleanup at the site, they would handle the case. As of March 2023, the San Mateo County Local Oversight Program (LOP) has opened the case to investigate the site under Case #: 559200 and are the lead agency to oversee investigation and or cleanup at the site.

Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY;RWQCB 2 - SAN FRANCISCO BAY;SAN MATEO COUNTY
School District:

Past Use that Caused Contam: NURSERY
Potential Media Affected: SOIL
Potential Contamin of Concern:

DDD
DDE
DDT
DIELDRIN

Site History:

The Mantegani Property Site is zoned for residential use. Residential single and multi-family buildings surround the property. The Site was utilized as an ornamental flowers nursery, specializing in snapdragons and carnations from 1931 to 1987. After the nursery operation ended, the nursery facilities including four greenhouse buildings were demolished and removed from the property. Currently the property is idle and vacant. Access to the property is restricted by a barbed wire along the northern boundary of the property and a
wooden fence surrounding the rest of the Site.

Status: CERTIFIED
Program Type: VOLUNTARY CLEANUP
CalEnviroScreen Score: 35-40%

Completed Activities

Title: Fieldwork
Title Link:
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Fieldwork
Date Completed: 1/9/2007
Comments: Fieldwork completed. Confirmation sampling indicates the bioremediation technique has successfully degraded the total DDT concentrations at the Site to levels below the Site specific cleanup goal. However, it was unable to completely degrade the dieldrin concentrations at the Site. The dieldrin site cleanup goal has been revised to a 95% UCL of 125 parts per billion from 30 ppb. The new cleanup represents a risk of 5 x 10^-6.

Title: Remediation Evaluation Sampling Data 10.30.06
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6014293
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Removal Action Completion Report
Date Completed: 10/30/2006
Comments: Dieldrin concentrations are is still elevated above the site cleanup goal. Further sampling is required. Soil pH has dropped again, the soil pH will be adjusted upward with lime.

Title: Community Survey and Profile
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6008653
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Community Profile
Date Completed: 12/22/2005
Comments: Community Survey and Profile completed. The area is mostly residential housing. There is a significant population of both Hispanic and Asian residents in the surrounding area, however outreach information was not required to be translated into any languages.

Title: Certification Package
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&enforcement_id=6008086
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Certification
Date Completed: 2/20/2007

Comments: Documents the in-situ bioremediation of soil impacted with dieldrin and DDT. Soil remediation results indicate Site cleanup reached the goal of a 10 ^(-6) risk factor.

Title: Remediation Evaluation Sampling Data 8.01.06
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6014290
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Removal Action Completion Report
Date Completed: 8/1/2006
Comments: Soil dieldrin concentration is still above the Site Cleanup goal

Title: Remediation Evaluation Sampling Data 9.27.06
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6014291
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Removal Action Completion Report
Date Completed: 9/27/2006
Comments: Dieldrin still above the site cleanup goal. It was determined that soil pH is too low and needs to be adjusted upward. Lime was added.

Title: Completion Report
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6012936
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Removal Action Completion Report
Date Completed: 2/20/2007
Comments: Report documents the nexts undertaken to breakdown dieldrin and DDT/DDE/DDD.

Title: Remediation Evaluation Sampling Data 7.12.06
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6014289
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Removal Action Completion Report
Date Completed: 7/12/2006
Comments: Dieldrin concentrations are still elevated.

Title: Mantegani RAW
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6009593
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Removal Action Workplan
Date Completed: 2/10/2006
Comments: The recommended and approved removal action is the use of a bio-remediation technology that with the application of select soil amendments and Factor enhances the natural bio-attenuation rate of the soil. Factor is a soil amendment that increases the naturally occurring microorganisms' ability to degrade chlorinated carbon chain chemicals of concern, such as the pesticides detected at the Mantegani Property Site. After the Factor and other necessary soil amendments are applied the soil, approximately two months will be required to achieve the cleanup goals of DDT and dieldrin in the soil. Confirmation samples will be collected to ensure cleanup levels are met. No excavation is required and the soil microorganism population will return to normal levels with the depletion of the Factor and other soil amendments.

Title: Estimated Future Cost Letter
Title Link: https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6014295
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Other Report
Date Completed: 1/5/2007

Comments:	Realized project costs have gone over the estimated project cost. A letter was prepared by DTSC to explain the cost overrun.
Title:	Remediation Evaluation Sampling Data 12.20.06
Title Link:	https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6014294
Area Name:	
Area Link:	
Sub Area:	
Sub Area Link:	
Document Type:	Removal Action Completion Report
Date Completed:	12/20/2006
Comments:	The December 20, 2006 sampling indicates that the dieldrin concentrations are dropping. Only one the eleven samples collect had a dieldrin concentration higher than the cleanup goal. Additional soil samples will be collected in the area of that sample the week of January 5, 2006.
Title:	Remedial Action Performance Evaluation
Title Link:	https://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=70000073&doc_id=6012538
Area Name:	
Area Link:	
Sub Area:	
Sub Area Link:	
Document Type:	Removal Action Completion Report
Date Completed:	9/13/2006
Comments:	The bioremediation process is working in reducing the pesticide concentrations in the soil. However, the process is taking longer than anticipated. The process requires more fertilizer, lime, and time than estimated. Site will be re-evaluated in approximately two to three weeks.
Title:	Remediation Evaluation Sampling Data 6.12.06

Acres: 2.1 ACRES
Supervisor: MARIKKA HUGHES
Cleanup Status: INACTIVE - NEEDS EVALUATION AS OF 9/28/2018
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: MANUFACTURING - INDUSTRIAL MACHINERY, MANUFACTURING - METAL, RECYCLING - DRUM, VEHICLE MAINTENANCE
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL
Potential Contamin of Concern:

METALS
POLYCHLORINATED BIPHENYLS (PCBS)
POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)
TPH-DIESEL

Site History:

Caltrans wanted to construct a maintenance yard on the Site. Historical information indicates that the site was formerly occupied by various industrial facilities which included a sheet steel mill and galvanizing plant, an insulating material manufacturer, and scrap car compacting. The Regional Water Quality Control Board, in a letter dated June 28, 2002, designated the shallow groundwater beneath the site as non-beneficial use based on the total dissolved solids.

Soil samples collected during an inspection conducted by the Department of Health Services (DHS), Toxic Substances Control Division in March 1984 detected copper and lead at concentrations up to 6,010 mg/kg and 1,020 mg/kg, respectively. DHS issued an order Mr. Hector Villaba (owner of Western Drums, Inc.) in April 1984 to remove all contaminated soil from areas of concern. Soil excavation and confirmation sampling was conducted in April 1984. Confirmation sampling results from the excavation areas indicated the copper and lead at 27 mg/kg and 5.3 mg/kg, respectively. In May 1984, DHS issued a letter to Mr. Vallalba indicating that all contaminated soil had been removed from the site and that the site had been adequately

cleaned up. A site screening conducted by DHS in May 1987 recommended no further action.

In October 1992 and June 1999, Caltrans conducted site investigations. Total petroleum hydrocarbons (TPH), polynuclear aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs) and metals were detected in soil above regulatory screening levels (PRGs). TPH, VOCs and metals were also detected in groundwater. Groundwater beneath the site has reportedly been designated non-beneficial by the San Francisco Bay RWQCB.

Caltrans entered into a Voluntary Cleanup Agreement (VCA) with DTSC in February 2001 to address the soil contamination at the property. Citing budgetary constraints, Caltrans terminated the VCA in April 2005 prior to conducting any remediation activities at the property. In response, DTSC requested that the current asphalt/concrete surface at the property be maintained to prevent potential exposure to soil contamination. In its April 26, 2005 letter terminating the VCA, Caltrans agreed to maintain the current asphalt/concrete surface and to evaluate subsurface conditions prior to any redevelopment of the property.

Site History:

The Site is located in an industrial area. There is a one-story building and a warehouse on the Site, which is used for automotive storage. A portion of the Site is leased to a wood pallet company and another portion is used for storage of inactive AT&T vehicles. From 1935 to 2000, DuPont de Nemours (DuPont) owned the Site. DuPont manufactured automotive paints and varnishes until 1982, and warehoused and distributed their products until 1990. Deerfield Realty Corporation acquired the Site in September 2000 and plans to develop it as a Class A office park.

Past Use that Caused Contam: MANUFACTURING - PAINT
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL

Potential Contamin of Concern:

ETHYLBENZENE
TOLUENE
TRICHLOROETHYLENE (TCE)
XYLENES

Site History:

Former International Paint Facility (Courtaulds coatings, Inc.) operated at the Site from 1947 to 1986. Resins, solvents, thinners, and pigments were used and
solvents held in underground and other tanks. The plant consisted of 5 buildings and a number of solid Waste Management units (SWMUs) including the Former Hazardous Waste Storage Area, Satellite Drum Storage, Solvent Distillation Unit, and Aboveground and Underground Storage Tank Areas.

Since 1986, subsurface investigations concluded that fire-line trench and railroad spur were the likely sources of contamination including toluene, ethyl benzene and xylenes. Trichloroethene (TCE) have also been detected but are likely attributable to an off-site source. In May 1991, approximately 500 tons of impacted soil from the source area were excavated and disposed off-site. A groundwater extraction and treatment system was in operation from December 1991 through February 1997 due to reduction and stabilization of contaminant levels in extracted groundwater.

Periodic groundwater monitoring has been performed at the subject site since 1989. In 1998, the Regional Water Board approved a baseline human health risk assessment and concluded that the remedial actions taken appeared to be effective. However, continued groundwater monitoring was deemed necessary at the time to demonstrate that the plume has stabilized and that natural attenuation is taking place. As a result, two additional years of groundwater monitoring of three wells (i.e., MW-6, MW-7, and MW-9) located within the contaminant plume was required and the data was used to evaluate if further monitoring would be necessary.

At the end of the two-year period, a CDM Status Update Report concluded that the groundwater plume appears to be stabilizing and shrinking, contaminant levels at have largely decreased to below drinking water Maximum Contaminant Levels (MCLs). The concentrations of ethyl benzene and xylenes have consistently been above their respective MCLs (0.700 and 1.750 mg/l) but with significant reduction from 47 mg/l of ethyl benzene to 8.5 mg/l and 120 mg/l of xylenes to 16.1 mg/l as of December 2001.

Regional Water Board required the preparation and implementing a residual risk management plan and recording a deed restriction until it can be demonstrated that the groundwater pollutant levels have dropped below MCLs. In 2002, the Regional Water Board intended to require no further action once the two requirements are met. The property owner tried to sell the property and seeked case closure. However, the owner did not like deed restriction due to loss of property value. The site technically required no further action but it's never formally closed.

TPH-GAS

Site History:

9The Site, identified with Assessor Parcel Number (APN) 01201100, consists of a 0.27-acre undeveloped property located on the western corner of Linden Avenue and Hillsdale Boulevard. A gasoline service station was developed at the Site sometime between 1946 and 1956 and operated until approximately 1998 when the underground storage tanks (USTs) were removed. Although there are no specific future development plans for the Site, the City would like to sell the property with unrestricted future land use.

Several environmental investigations, remediation activities, and monitoring events were conducted beginning in December 1985, when a leaking underground storage tank (LUST) was discovered. From 1998 through 2003, multiple site features were removed and over-excavated, including a 4,000-gallon diesel UST, an 8,000-gallon gasoline UST, a 6,000-gallon gasoline UST, a 1,000-gallon waste oil tank, a dispenser island, associated piping, hoists, a water collection sump, and an oil-water separator. Overall, a total of 720,93 tons of soil plus additional truckloads of soil were removed from the property for offsite disposal. On June 17, 1985, a leaking UST (LUST) case was opened for the Site with the San Mateo County (on file with the San Francisco Bay Regional Water Quality Control Board [RWQCB]). This LUST case was closed on November 17, 2003 by the San Mateo County Groundwater Protection Program (GPP). During this time, site investigations were conducted at the Site.

The following previous environmental site assessments were completed prior to DTSC oversight:
 1990-2003: Groundwater monitoring was conducted as part of the previous LUST investigation.

 2021: A Phase I Environmental Site Assessment (ESA) and Phase II ESA were prepared by Toeroek Associates, Inc. (Toeroek) and Tetra Tech, Inc. (Tetra Tech). The Phase I ESA identified potential for vapor intrusion (due to former site use) and potential impact from an off-site source (investigation of a release of trichloroethylene [TCE]). According to the Phase II ESA results, metals, total petroleum hydrocarbons (TPH) as motor oil, diesel, and gasoline as well as benzene, toluene, ethylbenzene, and total xylenes (collectively known as BTEX) were detected in soil; however, only concentrations of TPH as gasoline (TPHg) were detected above the San Francisco Bay RWQCB residential environmental screening levels (ESLs) (Ninyo & Moore

2023). Constituents detected in soil vapor and groundwater did not exceed the DTSC screening levels (Ninyo & Moore 2023).

Based on available information coupled with the results of the environmental investigations listed above, the primary contaminants of concern (COCs) have been identified as petroleum hydrocarbons, volatile organic compounds (VOCs), and lead. The SSI Report will be prepared to document investigation of soil, soil vapor, and groundwater at the Site, which was completed in February 2023. The SSI Report will be completed in accordance with the SSI Workplan, which was conditionally approved by DTSC on December 5, 2022.

LEAD

Site History:

This approximately 20-acre Site is currently Brittania Point Grand, a commercial park occupied by a number of biotechnology companies. Office buildings, parking areas, and landscaping are the setting for the Site. The Site was formerly a processing plant for the recovery of tin and steel from scrap tinplate. The plant had been in existence from 1922 until operations ceased in 1982. During plant operations, a two-acre evaporation pond existed on-site for the collection of plant effluent. Large piles of scrap steel generated in the detinning process were also stored on-site. In 1982 Tinmet Corporation (Tinmet) purchased the property. Tinmet submitted a closure plan for the plant to DTSC in 1982 and DTSC approved the closure plan. The primary chemicals of concern in soil, sludge, surface water, and groundwater were lead and zinc. Soils were removed to an average concentration of 500 parts per million (ppm) total lead. In late 1985, soils containing elevated levels of lead were removed from an adjacent Southern Pacific Railroad (SP) right-of-way. The objective of the soil remediation program on the SP right-of-way was to eliminate contact between surface water runoff from the Site and soils containing elevated lead concentrations. Investigations performed by a potential buyer for the Site in 1987 found elevated levels of lead in soils, with an average concentration of 1,000 ppm, and concentrations as high as 5,300 ppm. In order to address this issue, a one-foot cap of clean soil was placed over the whole Site. Brittania Point Grand purchased the property in 1997.

Status: CERTIFIED

Document Type: Certification
Date Completed: 6/1/1986
Comments: Certified site. In June of 1982, Tinmet submitted a closure plan to DHS. Closure was carried out from July 1982 through October 1985. Closure activities consisted of the removal of on-site commercial waste products, contaminated soils and sludges from various areas, shredder residue, two underground storage tanks, and liquid from the evaporation pond. The closure plan was overseen and approved by DHS. The primary chemicals of concern in soil, sludge, surface water, and groundwater were lead and zinc. Soils were removed to an average concentration of 500 ppm total lead. The SF Regional Water Quality Control Board oversaw surface and groundwater monitoring at the site during closure. In late 1985, soils containing elevated levels of lead were removed from an adjacent Southern Pacific (SP) Railroad right-of-way containing greater than 1,000 ppm of lead at the surface were excavated to a depth of six inches and disposed as hazardous waste. The excavated area, the trench, and a drainage ditch in the SP right-of-way were backfilled with clean imported soil. The objective of the soil remediation program on the SP right-of-way was to eliminate contact between surface water runoff from the site and soils containing elevated lead concentrations. However, concentrations of lead remained in areas of the right-of-way as high as 3,950 ppm. Following completion of remedial activities at the adjacent SP right-of-way, DHS certified closure of the site.

Feature Description:

Prior to DoD use, the Site was the Tanforan Race Track, primarily used for horse races. Around 1911, it was briefly used as an airfield. During World War I, the Site was used as a military training center. In 1942, former Camp Tanforan was acquired for use as a temporary assembly center for persons of Japanese ancestry shortly following the bombing of Pearl Harbor in December 1941. The U.S. Army took possession of the property on 3 April 1942, and initial construction was completed on 25 April 1942. The camp was constructed to house 7,900 people. The first group of Japanese internees arrived on 28 April 1942, and the Site reached a maximum capacity of 7,893 internees. Internees were housed in newly constructed barracks as well as the existing horse stables at the Site. Mess halls, recreation buildings, latrines, showers, and infirmaries were constructed to accommodate the internees. By 13 October 1942, the last of the internees were sent to a more permanent relocation center further inland. The Site closed as an assembly

center on 26 October 1942. Between November 1942 and March 1944, various branches of the DoD temporarily used the Site for housing troops. The Site officially transferred from the Department of the Army to the Department of the Navy on 1 March 1944. Under the U.S. Navy, the Site was known as the Naval Advance Personnel Depot San Bruno. Additional buildings constructed by the U.S. Navy included a boiler house, paint locker, rifle range building, and incinerator. The lease to the property was scheduled to terminate on 30 June 1946. An aerial photograph dated 29 July 1946 shows that all DoD-constructed buildings except one former barracks and one mess hall were removed. The lease termination documents for the property were not found during research. Following DoD use, the Site reopened as a race track until the early 1960s, and it was destroyed by a fire in 1964. In 1971, a commercial mall known as the Tanforan Park Shopping Center was constructed at the location. Additional commercial developments were constructed on the northern portion of the Site in the 1980s. The Tanforan Park Shopping Center reopened as The Shops at Tanforan after major renovations and a BART station were completed in 2005.

Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: MANUFACTURING - METAL
Potential Media Affected: SOIL
Potential Contamin of Concern:

METALS
POLYCHLORINATED BIPHENYLS (PCBS)
TPH-MOTOR OIL

Site History:

The site was formerly occupied by a wire rope and netting manufacturing plant operated by Edwards Wire Rope Company and a steel manufacturing plant operated by Bethlehem Steel. Homart acquired the property in 1980 for development. The site is located in a business park. This was also listed as a duplicate entry (HOMART DEVELOPMENT site ID 41330052) which has been deleted.

Sub Area:
Sub Area Link:
Document Type: Certification
Date Completed: 11/1/1983
Comments: Certified Site. An unspecified amount of contaminated soil was removed. Althought this site has been certified, the Department routinely monitors it and has classified it as a site in Operation and Maintenance (O&M). This certification was confirmed by a report prepared by the Auditor General. The Auditor General conducted an audit of the Department's records to confirm a list of sites where the Department was involved in the cleanup and the cleanup had been completed. This Auditor General list became the basis for our historical certification information. Many of the sites on this list were handled by our Surveillance and Enforcement Staff. Much of this work was in response to complaints from the public or reports from industry and the response action may have only addressed the immediate problem and not the entire facility. Our records do not indicate the actual date this site was certified. Our records show 11/1983. We have used the date 11/01/1983 because this gives us the earliest statute of limitations.

Document Type: Land Use Restriction - Site Inspection/Visit
Date Completed: 3/10/2016
Comments: DTSC staff conducted a site visit on February 11, 2016. The area of the site where contaminated soil is contained and which is subject to the restrictions of the Land Use Covenant was inspected. The perimeter of the building, surrounding walkways and asphalt parking lot east of the 681 Gateway building appeared to be in very good condition, with no visible signs of cracking or deterioration. DTSC concluded that the selected site remedial action remains protective of human health and the environment.

LEAD

Site History:

The former Exide Corporation site is located in an industrial/commercial area of South San Francisco. It is bordered by Lawrence Avenue to the north, littlefield Road to the east, commercial/industrial businesses both to the south and west. Exide Corporation operated from 1964 to 1986 as battery formulation, recharging, and repair facility. The soil at the site was found to be contaminated with lead. Soil removal was then conducted at the site between 1986 and 1988; approximately 260 cubic yards were removed. Additional investigation and soil removal was conducted with the oversight by San Mateo County and approved on July 26, 1994. On April 6, 1995, DTSC issued a letter closing the facility as a hazardous waste management facility. After submittal of a RCRA Facility Assessment Report, DTSC issued a no further action letter on January 8, 2001.

LEAD
SULFURIC ACID

Site History:

The site(~6,600 square feet) is located in South San Francisco near Oyster Point. The site is located in an industrial/ commercial area and is bordered by Lawrence Avenue to the north, Littlefield Road to the east, a removed railroad siding and warehouse to the south and warehouse buildings to the west. The San Francisco Bay is approximately one-quarter mile to the east. San Francisco International Airport is one mile to the south. Arthur Brothers Investment Company (owner) leased the site to Exide Corporation from 1964 to 1986. Exide Corporation had a sales office, warehouse, battery formulation, recharging, and repair facility primarily for forklift batteries and large industrial power batteries at this site. This site was permitted as a RCRA (Resource, Conservation, Recovery Act) Treatment and Storage facility for the neutralization system and battery storage area. Sulfuric acid solution, used to recharge the batteries, was on-site. The wastewater was treated in a neutralization system and sent to a public owned treatment water plant (POTW). The main battery storage was outside the building located in the southwest portion of the parking lot in a fenced and gated area. Exide closed this facility in August 1986 and moved the sales and service operations to 3470 Depot Road, Hayward, California. No manufacturing was moved to Hayward, California. Only the batteries and 5 gallon battery packs were transfered. Between 1986 to 1988, soil removal of approximately 260 cubic yards (cys) with high levels of lead (2400 to 100,000 milligrams per kilogram (mg/kg)) was conducted on the southern and the western strips adjacent to the battery storage area. The removal was under the oversight of Department of Health Services (DHS) predecessor to Department of Toxic Substances Control (DTSC) and San Mateo County Environmental Services. Soil was excavated to a depth of four feet in some areas. Confirmation samples showed residual lead levels up to 300 parts per million (ppm). US EPA conducted a Preliminary Assessment (PA) in June 1991. Conclusions were: all wastes removed, some soil excavated, soil lead levels remaining did not present an imminent threat to the public, grab groundwater samples showed elevated lead, but were not an imminent threat to the public, because surface water is not used for drinking water and the nearest drinking water well is located one to two miles from the site. Additional investigations and excavations took place in 1993. In the western strip the final lead levels, before back filling, ranged from 18 to 200 mg/kg with most samples below 100 mg/kg (only two samples were above 100 mg/kg). Soil under the battery storage area had up to 120 mg/kg lead. Soil borings at the southern boundary taken at three, five, eight, and ten feet below grade showed lead up to 230 mg/kg with most samples below 100 mg/kg. The excavated soil was sent to a Class I disposal site. Grab groundwater samples with high-suspended solids content ranged from 0.62 to 25.6 ppm for lead in unfiltered samples in 1988. Using filtered samples in 1993, the lead concentration was below 5 micrograms per liter (ug/l) from the four monitoring wells. This site had several certified closures, inside the building (sump and neutralization system) and the battery storage area in the parking lot (under RCRA), and two soil areas near the battery storage area. In April 1995, DTSC certified closure of the hazardous waste management facility. The Current tenant at the site is Dock It Cargo. Casino Games Rental occupies 288 Lawrence. The building is divided into units, which all appear to be occupied. The parking area in the rear of the building is gated and can be secured. There is no indication that any of the tenants use hazardous substances at this location.

UNDER INVESTIGATION

Site History:

A site screening of this property was completed in 2015. The Site Screening notes that Cycle Shack obtained a wastewater discharge permit from the City of South San Francisco in April 1979 to discharge chromic acid, coper cyanide, and nickel sulfate. During a site visit in May 1981, DTSC inspectors noted discolored soil and discolored standing water on the site. Notes from the site visit describe bad housekeeping practices, a transmission fluid-like liquid leaking from the garage, and a blue-silver material on the ground behind the back of the building. A "Drive-By" form completed in August 1981 identifies the locations of discolored soil and spills that were observed. Samples of these materials showed concentrations of chromium, copper, nickel, and lead that are of potential health and environmental concerns. No discolored soil or spills were observed during a September 2015 drive-by conducted by DTSC, including at the areas identified in the 8/25/1981 driveby form to have discolored soil.

The site screening recommends soil sampling and grab-groundwater sampling to investigate the concentrations of metals in soil and groundwater. While no discolored soil was observed during a recent site drive-by, the available information suggests that a release occurred at this site. Soil sampling

should target the areas previously identified to have discolored soil and spills, and locations where plating solutions may have been used. As additional site characterization is needed, the site status was changed to Inactive - Needs Evaluation. AM 3/2021

Description:	RP states that a business has released a large amount of petroleum product onto the ground. The business is in the process of attempting to cleanup the release with high power hoses. The results are that the release is entering into a canal adjacent to the property. RP also states that the cleanup efforts are creating a larger environmental impact to the canal which leads to SF Bay.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Nov 14, 2023

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Nov 14, 2023

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Oct 2, 2023

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Oct 2, 2023

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Oct 2, 2023

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Oct 2, 2023

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Oct 2, 2023

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Oct 2, 2023

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Oct 2, 2023

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made availabe by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 26, 2023

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 26, 2023

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Oct 26, 2023

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Feb 20, 2024

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Feb 7, 2024

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: May 2, 2023

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: May 2, 2023

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Sep 20, 2023

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from the Federal Communications Commission Data hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Sep 22, 2023

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Nov 14, 2023

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Dec 26, 2023

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Feb 15, 2024

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Feb 15, 2024

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Feb 15, 2024

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 15, 2024

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Waste Management Unit Database: WMUD

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

Government Publication Date: Jan 1, 2000

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Feb 15, 2024

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers: C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers: RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 17, 2024

Listing of Certified Processors: PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 17, 2024

Listing of Certified Dropoff, Collection, and Community Service Programs: CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 22, 2024

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 30, 2023

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Nov 30, 2023

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 30, 2023

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Feb 15, 2024

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

This listing includes Proposed Closure of Underground Storage Tank (UST) Cases which are being considered for closure by either the State Water Resources Control Board at a Future Board Meeting or the Executive Director that have been posted for a 60-day public comment period, and Closure of UST Cases with Closure Denials and Approved Orders. The lists are provided by the California Water Boards.

Government Publication Date: Dec 22, 2023

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System: UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Jan 24, 2024

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Feb 15, 2024

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 17, 2024

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Jan 17, 2024

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Feb 15, 2024

CALSITES Database: CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 30, 2023

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Feb 15, 2024

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 30, 2023

Delisted Cleanup Program Sites: DELISTED CLEANUP

A list of Cleanup Program sites which were once included - and have since been removed from - the list of Cleanup Program Sites in GeoTracker. GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.
Government Publication Date: Nov 30, 2023

Delisted County Records: DELISTED COUNTY
Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.
Government Publication Date: Feb 16, 2024

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST
This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST
This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST
Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST
Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

County

San Mateo County - LOP List: LOP SANMATEO
A list of Leaking Underground Storage Tank (LUST) facilities in San Mateo County. This list is made available by San Mateo County Environmental Health Services Division.
Government Publication Date: Dec 14, 2020

San Mateo County - CUPA Facilities List: CUPA SANMATEO
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Mateo County. This list is made available by San Mateo County Environmental Health Department which has been designated as the CUPA for the County.
Government Publication Date: Feb 20, 2020

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures by DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time.
Government Publication Date: Nov 15, 2023

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).
Government Publication Date: Sep 8, 2023

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.
Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.
Government Publication Date: Dec 18, 2023

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to September 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.
Government Publication Date: Sep 5, 2023

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/
Government Publication Date: May 19, 2023

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Jan 24, 2024

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Feb 25, 2024

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Dec 4, 2023

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: Nov 26, 2023

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 26, 2023

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Jan 26, 2024

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Government Publication Date: Aug 26, 2023

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jan 20, 2024

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jan 20, 2024

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: Nov 6, 2023

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: May 1, 2023

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into eAMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Jun 13, 2023

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 12, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Aug 30, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2023

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Oct 30, 2023

State

PFAS Sampling Locations: PFAS SAMPLING

This data is sourced from the State Water Board's GeoTracker Per- and Polyfluoroalkyl Substances (PFAS) Map tool which contains individual sampling points (i.e., soil boring, groundwater monitoring well, drinking water well for municipal drinking water systems, etc.) or a site location with PFAS analytical data. Includes analytical results that are finalized and submitted electronically by the Responsible Parties via GeoTracker's Electronic Submittal of Information Portal, and after it's accepted by a Regional Water Quality Control Board.

Government Publication Date: Sep 25, 2023

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Dec 20, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 31, 2022

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Jan 31, 2022

PFAS GeoTracker Cleanup Sites: PFAS GT CLEANUPS

A list of applicable cleanup sites from the State Water Resources Control Board's (SWRCB) GeoTracker data management system where one or more of the potential contaminants of concern are identified in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 30, 2023

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Jan 7, 2024

PFAS Investigations: PFAS INVEST

This list of potential Per- and Polyfluoroalkyl Substance (PFAS) sites is compiled from the California State Water Resources Control Board's (SWRCB) PFAS Investigations Map tool. The SWRCB issued investigative orders, per California Water Code (CWC) Section 13267 and/or 13383, to these sites. This does not mean that PFAS has been produced, used, or discharged at these sites. Orders were also issued to the public water systems to sample wells in the vicinity of these locations. The data includes locations for airports, landfills, suspected chrome plating facilities, publicly owned treatment works (aka wastewater treatment plants), bulk fuel terminals, refineries, and military facilities that have potential sources of PFAS.

Government Publication Date: Nov 28, 2022

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Mar 15, 2023

Toxic Pit Cleanup Act Sites: TOXIC PITS

The Toxic Pits Cleanup Act (TPCA) list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. This list was maintained by the State Water Resources Control Board (SWRCB), is not longer maintained, and updates are not planned.

Government Publication Date: Jul 1, 1995

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked by the California Department of Toxic Substance Control's (DTSC) EnviroStor data management system.

Government Publication Date: Nov 23, 2023

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Feb 15, 2024

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Oct 16, 2023

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Handlers from Hazardous Waste Manifest Data: HAZNET

A list of handlers not otherwise classified as Treatment, Storage, Disposal facilities (TSDF) or generators from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Oct 24, 2016

Generators from Hazardous Waste Manifest Data: HAZ GEN

List of handlers listed as having generated waste from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

TSDF from Hazardous Waste Manifest Data: HAZ TSD

List of Treatment, Storage, and Disposal Facilities (TSDFs) from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters: HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Jan 2, 2024

Registered Waste Tire Haulers: WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 5, 2023

California Medical Waste Management Program Facility List: MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Jan 8, 2024

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Dec 6, 2021

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 17, 2024

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Nov 30, 2023

Mines Listing: MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jun 16, 2023

Recorded Environmental Cleanup Liens: LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Dec 18, 2023

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 30, 2023

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2020

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

San Mateo County Medical Waste Facility List: MED WST SANMATEO

The San Mateo County Environmental Health Services Division maintains this list of medical waste facilities. The Medical Waste Program regulates the generation, disposal, and transportation of medical waste. Medical waste consists of sharps (needles, razor blades, pipette bits), bloody materials, bandages, and any other waste contaminated with body fluids. This listing only contains medical waste facilities operating in San Mateo County.

Government Publication Date: Jul 15, 2022

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Re: Ground-Water Monitoring Report, 20 South Linden Avenue, South San Francisco, California

Gentlemen:

This report presents the results of ground-water analyses conducted in September and October 1987 at the former Sun Chemical Corporation facility, 20 South Linden Avenue, South San Francisco. This semi-annual report is submitted in response to directives from the Regional Water Quality Control Board (RWQCB) and the Department of Health Services (DHS).

The site, listed as a state priority ranked site, has been decontaminated in accordance with a Remedial-Action Plan (RAP), prepared pursuant to Section 25356.1 of the Health and Safety Code.

The DHS has informed the current property owner, U.A. Local 38 Pension Trust Funds, that the monitoring wells can be abandoned after the September 1987 sampling event if ground-water analytical results show no further deterioration of the shallow aquifer. EMCON Associates understands that the RWQCB must concur with this opinion. Hazardous waste and contaminated soils have been removed from the site, and ground-water results have consistently indicated low levels of contamination (see Table 1). The owner is anxious to secure agency confirmation that remediation activities at the site are complete in order that planned property development can proceed. EMCON requests that the RWQCB review this report and relieve the owners of the responsibility of maintaining the ground-water monitoring program.

GROUND-WATER INVESTIGATION

Four ground-water monitoring wells were originally installed and sampled in September 1985 (see Figure 1) in response to directives from the DHS and the RWQCB. After receiving the analytical data, the RWQCB determined that the level of pollution in the ground water did not warrant further work at that time (RWQCB correspondence dated December 3, 1985). The RWQCB ordered that the wells be sampled twice a year to monitor migration of chemicals and that samples continue to be analyzed for petroleum hydrocarbons (benzene, toluene, and xylene), oil and grease, pH, barium, total chromium, copper, lead, zinc, and cyanide. The wells were sampled again in March 1986, and March, September, and October 1987.

EMCON field technicians collected ground-water samples in accordance with the procedures described in Attachment 1. The samples were transported to State-certified laboratories and analyzed according to the U.S. Environmental Protection Agency methods listed in Attachment 1.

SUMMARY OF RESULTS

The analytical results from all ground-water sampling events are summarized in Tables 1 and 2. Certified Analytical Reports for the September and October 1987 sampling events are included in Attachment 2.

All ground-water analyses for the presence of the heavy metals, barium, copper, chromium, lead, and zinc, indicate that concentrations have historically been below or near primary drinking water standards (known as Maximum Contaminant Levels or MCLs). Analytical results from the October 1987 sampling event reveal the following:

- Barium and total chromium are below detection limits
- Copper and zinc concentrations are below detection limits or two orders of magnitude below the MCL.
- Lead levels are near or below the MCL and are one order of magnitude below the designated cleanup level of 0.5 ppm (Water Quality Goals and Hazardous and Designated Levels for Chemical Constituents, California Regional Water Quality Control Board, Central Valley Region, Jon B. Marshack, March 1987).

Analyses for volatile organic compounds show trace levels of toluene in E-4 and E-2 and trace levels of benzene in E-2. Toluene levels are just above detection limits and benzene levels are one order of magnitude above drinking water standards. The aquifer is not connected to a source of designated or potential domestic/municipal water supply.

Five to seven inches of floating product was measured in Well E-3. It was analyzed in March 1987 for the presence of heavy metals, organics, and polycholorinated biphenyls. The ground water below the floating product was not analyzed because of concerns for the integrity of the water sample. Results of the floating product analysis are included in Table 2. The analyses did not positively identify the floating product but the chromatographic pattern is typical of oil. The analyses did not detect any petroleum hydrocarbon (including benzene, toluene, xylene) or polychlorinated biphenyls.

Floating product has not appeared in any of the other wells. Its existence in Well E-3 is believed to be the result of a small isolated pocket of waste, possibly printing oil.

Please do not hesitate to call if you have any questions regarding the preceding data. We look forward to a timely response to our request for a review of these results and a decision about the future management of the wells.

Very truly yours,

EMCON Associates

Attachment 1

GROUND-WATER SAMPLING AND ANALYSES FIELD PROCEDURES AND ANALYTICAL METHODS

ATTACHMENT 1

GROUND-WATER SAMPLING AND ANALYSES
FIELD PROCEDURES AND ANALYTICAL METHODS

Ground-water monitoring wells were sampled and analyzed for the following constituents:

- Barium, total chromium, copper, lead, and zinc
- Petroleum hydrocarbons (benzene, toluene, and xylene)
- Oil and grease
- Cyanide
- pH

Floating product discovered in Well E-3 in March 1987 was analyzed for polychlorinated biphenyls in addition to the constituents listed above.

FIELD PROCEDURES

Prior to each sampling event the ground-water monitoring wells were purged by removing 4 to 10 volumes of water with a 2-inch bladder pump. Samples were collected through the pump's Teflon discharge tube, placed in EPA-approved containers, labeled, logged onto chain-of-custody forms, and transported to the laboratory on ice. The floating product discovered in March 1987 was collected with a dedicated bailer, placed in an EPA-approved container, labeled, logged, and transported as above.

ANALYTICAL METHODS

Laboratory testing was conducted using the following EPA-approved methods.

Analysis for metals in ground water was performed according to procedures taken from Methods for Chemical Analysis of Water and Wastes (EPA-600/4-79-020, March 1983 Revision, Cincinnati, Ohio) and Part 300 of Standard Methods for the Examination of Water and Wastewater (16th Edition, 1985, American Public Health Association Publishing Office, Washington, D.C.). The floating product was digested according to Method 3050, Test Methods for Evaluating Solid Waste (SW-846, 2nd Edition, Revised) and analyzed by flame atomic absorption according to Method 7000 Series.

Analysis for oil and grease was performed by gravimetric techniques according to EPA Method 413.1 in Methods for Chemical Analysis of Water and Wastes (EPA-600/4-79-020, March 1979, Cincinnati, Ohio).

Analysis for cyanide was performed according to procedures taken from EPA Method 335.2, as described in Methods for Chemical Analysis of Water and Wastes (EPA-600/4-79-020, March 1979, Cincinnati, Ohio) and by EPA Method 9010, as described in Test Methods for Evaluating Solid Waste (SW-846, 2nd Edition, Revised).

Analysis for pH in ground water was performed using a pH meter according to EPA Method 150.1. Analysis for pH on the floating product used EPA Method 9040, as described in Test Methods for Evaluating Solid Waste (SW-846, 2nd Edition, Revised).

Analysis for petroleum hydrocarbons, benzene, toluene, and xylene was performed according to EPA Methods 5030, 8015, and 8020 as published in Test Methods for Evaluating Solid Waste: Physical/Chemical Methods (SW-846, 2nd Edition, Revised), and EPA Method 602 published in Methods for Organic Chemical analysis of Municipal and Industrial Wastewater (EPA 600/4-82-057, July 1982).

Analysis for polychlorinated biphenyls was performed according to EPA Method 608 published in Methods for Organic Chemical Analysis of Municipal and Industrial Wastewater (EPA 600/4-82-057, July 1982).

Subject: ASAP Priority Analysis of Three Water Samples Identified as "Project 824-01.02 E87-1051" Received October 5, 1987.

Dear Ms. Bazar:

Analysis of the above referenced samples has been completed. This report serves as written confirmation of results transmitted verbally on October 6, 1987. Results of the analysis are presented in Table 1. Brief descriptions of sample handling and analytical methodology are presented in the following paragraphs.

Samples were delivered by ANATEC courier on October 5, 1987 at 8:00 p.m. under documented chain-of-custody. On receipt, sample custody was transferred to ANATEC sample control personnel. Samples were noted to be intact, legibly labeled, cold by virtue of refrigerated shipment, and in otherwise good condition. Subsequent to check-in, the samples were placed in secure storage where they were maintained at four degrees centigrade until analysis commenced.

Each sample was analyzed to measure total oil and grease by partition-gravimetry following Method 502 C found in Standard Methods for the Examination of Water and Wastewater, APHA et al., 16th edition, 1985. Briefly, each sample was extracted three times with freon, the freon extracts for each sample were combined and evaporated, and the residue was weighed and reported as total oil and grease.

Each sample was also analyzed to measure total cyanide following Method 413 C found in Standard Methods for the Examination of Water and Wastewater, APHA et al., 16th edition, 1985. Briefly, aliquots of the samples were reflux-distilled. Cyanide as hydrocyanic acid was released from cyanide complexes and absorbed in a scrubber containing sodium hydroxide solution. The cyanide ion in the absorbing solution was converted to cyanogen chloride by reaction with chloramine-T. Pyridine-barbituric acid was added and the concentration of cyanide was determined spectrophotometrically.

Various quality control samples were analyzed with the samples. These included method blank, sample replicate, analyte-fortified (spiked) sample aliquots, method standard and external standard. Results of the quality control sample analyses are maintained with the sample data package. Details of the procedures may be provided upon request, but are not included in this report.

Should you have questions regarding results or procedures, please feel welcome to call.

Following are the results of analyses on the samples described below.

Project Number: 583-03.07, E87-0980

Lab Numbers: S7-09-145-01 thru S7-09-145-03
Number of Samples: 3
Sample Type: Waters
Date Received: 9/14/87
Analysis Requested: Volatile Halocarbons

The method of analysis for volatile halocarbons in waters is taken from E.P.A. Method 601. The samples are examined using the purge and trap technique. Final detection is by gas chromatography using a Hall electrolytic conductivity detector.

Subject: Analysis of Three Water Samples Identified as "Project 824-01.02" Received September 4, 1987 to Measure Oil and Grease Content.

Dear Ms. Bazar:

Analysis of the above referenced samples has been completed. Results of the analysis are presented in Table 1. Brief descriptions of sample handling and analytical methodology are presented in the following paragraphs.

Samples were delivered by ANATEC courier September 4, 1987 at 8:00 p.m. under documented chain-of-custody. On receipt, sample custody was transferred to ANATEC sample control personnel. Samples were noted to be intact, legibly labeled, cold by virtue of refrigerated shipment and in otherwise good condition. Subsequent to check-in, the samples were placed in secure storage where they were maintained at 4°C until analysis commenced.

Each sample was analyzed to measure total oil and grease by partition-gravimetry following Method 502C found in Standard Methods for the Examination of Water and Wastewater, APHA et al., 16th edition, 1985. Briefly, each sample was extracted three times with freon, and the freon extracts for each sample were combined and evaporated. The residue from each sample was weighed and reported as total oil and grease.

While sample "E02 9/1" was being extracted, the separatory funnel containing it exploded; therefore, sample "E02" was lost. The invoice has been adjusted accordingly.

Various quality control samples were analyzed with the samples. These included method blank and method standard. Results of the quality control sample analyses are maintained with the sample data package. Details of the procedures may be provided upon request, but are not included in this report.

Please feel welcome to contact us should you have questions regarding procedures or results.

SOIL

Site History

Sun Chemical manufactured printing ink at the site from 1927 to 1978, resulting in hazardous materials consisting of mixed inks, ink vehicles and pigments found as liquids and sludges in tanks and sumps, spillages on the main building floor, and in contaminated soil. The property was sold to Berman Corporation in 1979, who subsequently sold the property to Rental City Trucks. The property ownership was transferred to U.A. Local Pension Trust Funds in 1981.

PERSONNEL QUALIFICATIONS

Frank Poss, REA

Professional Service Industries, Inc.
Department Manager

Mr. Poss joined Professional Service Industries, Inc. (PSI) in 1993 as a Department Manager. He has brought with him 33 years of experience in the management of environmental site assessments; groundwater and soil remediation projects; hazardous waste management; and subsurface investigation programs. His experience includes supervision of project and staff level personnel, as well as subcontractors, implementation of QA/QC programs and Health and Safety Programs, contractual negotiations, and budgetary management of projects ranging from $20,000 to over $1,000,000. Mr. Poss has completed over 1,000 ESAs in his career and as a Senior Reviewer, he has reviewed over 1,000 ESAs from sites across the United States. He was the project manager for over $2,000,000 of work for Caltrans, including projects that involved wetlands studies, preliminary endangerment studies, remedial investigation, transportation corridor studies, and landfill assessments. The projects included work throughout the State of California. Mr. Poss has also been the project manager on numerous geotechnical investigations throughout Northern California with projects ranging from small tilt up buildings to multi-story residential buildings to large distribution facilities.

Education

Master of Science in Geology, San Diego State University, 1986

Bachelor of Arts in Geology, University of California, Santa Barbara, 1983

Certifications

- EnvironmentalProfessional – Phase I & II ESA, Project Management, PSI
- Registered Environmental Assessor, #REA05522, California
- AHERA Asbestos Building Inspector – #28719
- IAQ/Mold Inspector, PSI

Total Experience

33 years

Representative Project Experience

Environmental Site Assessments - Citigroup, Northern California, California

Project manager for over 400 Phase I/II ESA projects associated with Citigroup branches throughout the State of California. Mr. Poss was the manager for two separate portfolios of over 100 Citigroup branches each, which had a quick four-week turnaround with all reports delivered on time. The environmental assessments were completed according to standard protocol and included regulatory record review, site reconnaissance, aerial photograph interpretation, and report preparation.

Soil and Groundwater Studies - State of California Department of Transportation, Bay Bridge, California

Project manager for a site investigation for CalTrans at the “Maze” (the busiest freeway intersection in Northern California) and the West Approach to the Bay Bridge. The project was conducted as part of the seismic retrofit program. The project objective was to evaluate whether soil and groundwater generated during seismic retrofitting would be handled as a hazardous waste. The project included the drilling of over 500 borings and the analyses of these samples for metals, volatile organics, semi-volatile organics, and PCBs.

Preliminary Endangerment Study - Westlake Realty, Foster City, California

Project manager for a Preliminary Endangerment Study for the DTSC for a new school in Foster City, California. Multiple possible sources of impact at the property required the drilling of over 100 borings, 25 soil-vapor samples, and 15 indoor air samples. The preparation of a Human Health Risk Evaluation allowed PSI to obtain a partial site closure, which allowed construction to be completed while remedial activities on a release from a former dry cleaner were conducted.

Jorge Balde

Professional Service Industries, Inc.
Environmental Scientist

Mr. Balde joined Professional Service Industries, Inc. (PSI) in 2022, as an Environmental Scientist.

Mr. Balde has done work on the completion of Phase I Environmental Site Assessments (ESA) and Environmental Site Surveys. Report preparation includes property reconnaissance; federal, state, and local regulatory agency review; property background searches into regional water quality control board records, property title histories, federal and state hazardous material files, as well as the review of aerial photographs, topographical maps, and other historical environmental data research.

Mr. Balde has extensive hazardous material compliance management experience and superior knowledge of state and federal regulations. Projects include emergency generator and hazardous material permitting as well as hazardous material inspections and plan reviews.

Mr. Balde has also been a field technician involved in air sampling, soil sampling, and groundwater sampling for LUST Envirostor, and Cleanup Sites in Northern California. Mr. Balde undertakes the sample collection and assists in the completion of technical groundwater sampling reports for these projects.

Education

Bachelor of Arts in Geography with a focus in Environmental Science at University of California, San Francisco State

Representative Project Experience

JC Penney, Nationwide
Prepares and maintains the Hazardous Material Business Plans for over 75+ JC Penney locations in addition to managing the permitting for back-up generators. Liaison for JC Penney and their designated CUPAs throughout multiple counties.

Merit Hill, Northern California, California
Completes multiple Phase I Environmental Site Assessments (ESA) for Merit Hill for storage facilities in Northern California.

24th Street, San Francisco, Northern California
Completes indoor and outdoor air sampling for a dry-cleaning release in San Francisco, California.

Hayward Unified School District, Hayward, California
Completes site audits and environmental review reports associated with the hazardous materials business program for over 30 school sites for Hayward Unified School District.

R.D. Olson Development, San Carlos, California
Conducts quarterly groundwater monitoring sampling for multiple monitoring wells associated with a Cleanups (SLIC) site.

Caliber Collision, Northern California
Completes various Phase I Environmental Site Assessments (ESA) and Environmental Site Surveys for primarily auto repair facilities throughout Northern California.
