

## Attachment 2 Preliminary Cost Calculations

**45° Parking**

In order to repurpose typical Grand Avenue angled parking spaces, approximately 7-10 barriers would be required to cover a linear dimension of 42-60 feet.

Barriers can be ordered through multiple vendors, and can be shipped as early as 7 days or typically 2 weeks.

### Barricade Options

#### Orange-florescent water-filled barricades

Typically, \$265 each (6 feet long)

Min Estimated:  
(\$265 x 7 = \$1855)

#### Steel barricades

Typically, \$90 each (6 feet long)

Min Estimated: (\$90 x 7 = \$630)

### Staff Time

Based on preliminary estimates by Public Works, the estimated staff time associated with installation and removal at each location is approximately \$200 per hour.

### Note:

ECD and Public Works Staff recommend pursuing water-filled barricades, given the high need for visibility along Grand Avenue and the barricades weigh up to 600 lbs. when filled, which would allow greater protections for patrons using the outdoor dining area. In addition, the water-filled barricades also feature mountable screens that can act as wind screens to further enhance customers' dining experience on the right-of-way.
